# Feeding Carrots or Sugar <br> Beets to Cattle 

Drs. Steven Rust and Dan Buskirk, MSU Dept. of Animal Science

BEEF<br>BRIEF<br>MICHIGAN STATE UNERSTY BBeef Team

Reprinted from Cattle Call, 2008, Vol 13, Iss 4

Root crops such as carrots and sugar beets can be fed to beef cattle. The nutrient contents are shown in Table 1. Root crops can have ash contents greater than listed in the table due to soil contamination. Long term storage may be a challenge with root crops.

| Feed | $\begin{gathered} \text { DM, } \\ \% \end{gathered}$ | $\begin{gathered} \text { TDN, } \\ \% \end{gathered}$ | ME, Mcal/ lb | $\begin{gathered} \text { CP, } \\ \text { \% } \end{gathered}$ | Fat, \% | Ash, \% | $\begin{gathered} \mathrm{Ca}, \\ \% \end{gathered}$ | $\begin{aligned} & \mathrm{P}, \\ & \% \end{aligned}$ | $\begin{aligned} & \mathbf{K}, \\ & \% \end{aligned}$ | $\begin{aligned} & \mathbf{S}, \\ & \% \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Carrots | 12 | 84.0 | 1.35 | 9.9 | 1.4 | 8.2 | . 40 | . 35 | 2.80 | . 17 |

|  |  |  |  |  |  |  |  |  |  |  |

## Sugar beets

It is
recommended to process sugar beets prior to feeding to eliminate the possibility of lodging in the esophagus or trachea and causing bloat or choke. This is likely more of a problem with small rather than large sugar beets. Mashing the sugar beets by driving over them with a tractor may be sufficient processing. Sugar beets have a nutrient profile similar to corn silage. They may be most suited for use in cow and backgrounding/ growing diets. The high sugar content may limit the use in
backgrounding/ growing diets to 20\% of the dry matter (DM). Up to 50\% of ration DM could be used in cow diets.

## Carrots

Carrots are quite palatable and readily consumed by cattle. Carrots have 91\% the metabolizable energy value of corn, on a DM basis. There is a popular press report that indicates $40 \%$ of a feedlot diet DM as carrots did not cause any deleterious affects. Feeding high levels of fresh carrots may cause some scouring which can be minimized by storage for a few weeks. Carrots can also serve as an energy source in cow diets. A report indicated cows will eat up to 35 lb of carrots per day.

## Pricing the root crops

Both root crops contain a lot of water so make sure the price reflects that. It is recommended to value these root crops on a DM (water free) basis and similar weight units. For example, suppose you were offered carrots at $\$ 20$ / ton and you wanted to compare it to $\$ 5.70 /$ bu. corn. The value of carrots is a function of the energy content and moisture level. The first step is to convert corn price to $\$ /$ ton. There are $35.7 \mathrm{bu} . /$ ton (2000/56) of U.S. \#2 corn (56 lb/ bu.). Therefore, a ton of corn costs $\$ 203.49 /$ ton (as is) or $\$ 239.40$
(\$203.49/.85) on a DM basis. The cost
of carrots on a DM basis is $\$ 166.67 /$ ton (\$20.00/ .12). The carrots have an energy content of 1.35 Mcal of $\mathrm{ME} / \mathrm{lb}$ of DM and a moisture level of $88 \%$ Corn has 1.48 Mcal of ME/ Ib of DM and a $15 \%$ moisture level. The cost per Mcal of ME from corn and carrots would be $\$ .81$ (\$239.40/ (1.48 x 2,000) and \$. 62 ( $\$ 166.67 /(1.35 \times 2,000)$, respectively. In this price comparison, carrots were a better buy. The conclusion may change when the price relationship between corn and carrots is different. Tables 2 and 3 present the values of carrots and sugar beets at different corn and hay values. In the tables, no price adjustments were made for protein differences in the diets.

|  | Value of corn |  |  | Value of carrots |  | Value of sugar beets |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \$ / \mathrm{bu} . \\ (\mathrm{as}-\mathrm{is}) \end{gathered}$ | $\begin{aligned} & \text { \$/ton } \\ & \text { (as-is) } \end{aligned}$ | $\begin{gathered} \text { \$/ton } \\ \text { DM } \end{gathered}$ | \$/Mcal ME/cwt | Equiv. <br> price <br> S/ton DM | $\begin{aligned} & \text { S/ton } \\ & \text { (as-is) } \end{aligned}$ | Equiv. <br> price <br> \$/ton DM | $\begin{aligned} & \$ / \text { ton } \\ & \text { (as-is) } \end{aligned}$ |
| 3 | 107.10 | 126 | . 04 | 114.93 | 13.79 | 104.72 | 20.94 |
| 4 | 142.80 | 168 | . 06 | 153.24 | 18.39 | 139.62 | 27.92 |
| 5 | 178.50 | 210 | . 07 | 191.55 | 22.99 | 174.53 | 34.91 |
| 6 | 214.20 | 252 | . 09 | 229.86 | 27.58 | 209.43 | 41.89 |
| 7 | 249.90 | 294 | . 10 | 268.18 | 32.18 | 244.34 | 48.87 |

Table 3. Value of carrots and sugar beets as a replacement for hay in cattle diets with various hay prices

| \$/ton <br> (as-is) | \$/ton DM | S/Mcal <br> ME/cwt | Equiv. price <br> S/ton DM | \$/ton <br> (as-is) | Equiv. price <br> S/ton DM | \$/ton <br> (as-is) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 60.00 | 68.18 | .04 | 97.92 | 11.75 | 89.22 | 17.84 |
| 80.00 | 90.91 | .05 | 130.56 | 15.67 | 118.96 | 23.79 |
| 100.00 | 133.64 | .06 | 163.20 | 19.58 | 148.69 | 29.74 |
| 120.00 | 136.36 | .07 | 195.84 | 23.50 | 178.43 | 35.69 |
