Carriage Hills Gardens: A Sustainable Low Impact Development for a Stronger Community and Higher Quality of Life

John Gundry  Spring 2016  LA-447  Master Plan  Page 1 of 2

Community, Live, Work, Play

The concept of the Carriage Hills Village is that the community functions as a singular entity, a living breathing organism that has a symbiotic relationship with nature, using natural processes as the force to sustain life. The community is a complex and diverse organism with many parts, all performing individual tasks and creating a unique identity that is the strength of the community. Each sense of community and an identity of the place, pioneer has more pride and a higher quality of life.

Unity and Authenticity of the Site creates a human quality of life but the aspect of life is broken down into basic needs and this site adheres. The need for clean air, food, and water. Air is purified by the large stands of trees forming the limbs on both sides of the site. Water on site is cleansed and filtered through holding basins, green roofs, bi-digester and infiltration basins. The community expresses a need for high quality, clean, and fresh produce and more options for food within walking distance. This is accomplished by removing the large box office stores that on site and turning it inside out. And mixing small specialty food stores what on the streets and areas of heavy pedestrian traffic. Fire instead of Voss in location. It is spread throughout the site in the form of small bakeries, delis, fresh produce, farmers markets, street vendors, whole foods, and organically locally produced farming.

The force behind all life on earth is a natural process and perfectly functional ecosystems. At the core of the Carriage Hills Village is a vibrant beating heart of people, movement, activity, events, spells, sites, and life. The people of that live work and play within the site and live. The devastated blood cells that move throughout the site.floods all areas with that vibrant life force. Through the junctions of quality life people lose energy and blood cells become diseased. The vials are the blue Actors nurse slowly move out and into the vials that return carbon and other pollutant from our body and replaced people with oxygen and an architecturally pleasing environment.
