

Forest Carbon & Climate Program

Forestry 833:

Human Dimensions of Forest Carbon Management

Spring 2018 Online Graduate Course

The course examines forest values relative to economic and ecological benefits and the structure and function of community decisions about forest policies and the related impact on forest-based climate change mitigation projects.

For more information:

> Email forestc@msu.edu or visit for.msu.edu/forestcarbon

Build capacity in the following skills:

- Analyzing influences of land management and decision-making
- Applying guidance documents and participatory engagement practices
- Measuring community-level impacts of activities

Graduate Certificate in Forest Carbon Science, Policy and Management

Take two additional courses to earn a Graduate Certificate in Forest Carbon Science, Policy and Management:

- FOR 835: Forest Carbon Policy, Economics, and Finance
- FOR 837: Measurement and Monitoring of Forest Carbon

Graduates gain the technical skills to work on carbon mitigation projects in competitive industries alongside an extensive alumni network.

Scholarship funding available. Please contact us for more information.
