

NATIONAL IMPLEMENTATION OF REGIONAL PESTICIDE POLICIES IN WEST AFRICA: GHANA CASE STUDY REPORT

Amadou Diarra and Oyinkan Tasie

Food Security Policy *Research Papers*

This *Research Paper* series is designed to timely disseminate research and policy analytical outputs generated by the USAID funded Feed the Future Innovation Lab for Food Security Policy (FSP) and its Associate Awards. The FSP project is managed by the Food Security Group (FSG) of the Department of Agricultural, Food, and Resource Economics (AFRE) at Michigan State University (MSU), and implemented in partnership with the International Food Policy Research Institute (IFPRI) and the University of Pretoria (UP). Together, the MSU-IFPRI-UP consortium works with governments, researchers and private sector stakeholders in Feed the Future focus countries in Africa and Asia to increase agricultural productivity, improve dietary diversity and build greater resilience to challenges like climate change that affect livelihoods.

The papers are aimed at researchers, policy makers, donor agencies, educators, and international development practitioners. Selected papers will be translated into French, Portuguese, or other languages.

Copies of all FSP Research Papers and Policy Briefs are freely downloadable in pdf format from the following Web site: www.foodsecuritylab.msu.edu

Copies of all FSP papers and briefs are also submitted to the USAID Development Experience Clearing House (DEC) at: <http://dec.usaid.gov/>

AUTHORS

Amadou Diarra (diarraamadou947@gmail.com) is an agronomist and consultant to MSU. He is and former permanent secretary for the Comité Sahélien des Pesticides (CSP).

Oyinkan Tasié (otasié@msu.edu) is Assistant Professor of International Development in the Department of Agricultural, Food and Resource Economics at Michigan State University, East Lansing, Michigan, USA.

ACKNOWLEDGEMENTS

The authors wish to thank Mr. Eric Bentsil Quaye and his colleagues for their invaluable assistance in setting up market visits, interviews with key actors and in assembling important documentation pertaining to pesticide markets in Ghana. We are likewise grateful to the various farmers, traders and regulators who met with us to share their perceptions of pesticide markets and regulatory structures. Finally, we wish to recognize the financial support for this study which comes from the West Africa Regional Bureau of USAID through the Food Security Innovation Lab under contract AID-OAA-L-13-00001. The authors alone remain responsible for the content of this report.

This study is made possible by the generous support of the American people through the United States Agency for International Development (USAID) under the Feed the Future initiative. The contents are the responsibility of the study authors and do not necessarily reflect the views of USAID or the United States Government

1. INTRODUCTION

1.1. Context

This paper examines pesticide¹ markets and regulations in Ghana. This study explores progress to date in Ghana's country-level implementation of ECOWAS regional pesticide policies. As part of a seven-country set of comparative case studies, this work collectively aims to explore the reasons for uneven rates of country implementation of regional agricultural input policies.

West African countries have long recognized their strong regional interdependencies in agricultural and food markets. For many centuries, long distance trading routes have linked different agro-ecological zones within the region. In more recent years, cross-border movements of people, livestock, farm inputs and outputs have underscored the importance of regional interdependencies for ensuring food security.

Beginning in the 1990s, regional organizations such as CILSS and ECOWAS² have increasingly promoted regional harmonization of agricultural input policies as a means of accelerating agricultural productivity growth, increasing technology spillovers and improving national and regional food security. Given that the region's collection of multiple small countries straddle common agro-ecological zones, the introduction of common regional regulations throughout the region holds the promise of enabling input suppliers to exploit economies of scale in input production, procurement and distribution as well as prospects for technology spillovers (Alston 2000; Haggblade 2013). West African countries have, therefore, generally promoted regional collaboration, with particularly strong bonds developing among the francophone members of WAEMU³ and CILSS.

While regional policies governing inputs such as fertilizer and seeds have been well studied (Keyser et al. 2015), regional pesticide policies and markets have not. In addition to filling this gap, the pesticide studies in this series offer a potentially instructive contrast between the longtime CILSS member countries, which began to implement common regional pesticide regulations in 1992, and non-CILSS ECOWAS member countries, which have recently adopted the CILSS regulatory framework as its model for managing regional pesticide policies in the humid coastal zones.

The CILSS member countries have implemented harmonized regional pesticide policies among its member states despite very different levels of human, administrative and scientific capacity.

¹ Pesticides include three categories of agricultural inputs: herbicides, insecticides and fungicides.

² Founded in 1975, the Economic Community of West African States (ECOWAS) includes 15 member states: Benin, Burkina Faso, Cape Verde, Cote d'Ivoire, Ghana, Guinea, Guinea Bissau, The Gambia, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone, and Togo. Largely overlapping with the membership of CILSS, ECOWAS nonetheless excludes Mauritania and Chad (both CILSS members) while including non-CILSS members Nigeria, Ghana, Sierra Leone and Liberia. ECOWAS aim to create a West African free-trade zone and eventually a common monetary union for a region with an estimated 2010 population of about 300 million people.

³ The West African Economic and Monetary Union (WAEMU), known as UEMOA in French and founded in 1994, includes the eight francophone countries sharing the common currency of the CFA franc: Benin, Burkina Faso, Cote d'Ivoire, Guinea Bissau, Mali, Niger, Senegal et Togo.

For this reason, ECOWAS has modeled its West Africa regional pesticide policy regulations on the CILSS system. In April 2013, ECOWAS formally asked CILSS to help in expanding regional pesticide implementation to the coastal countries. This staggered implementation of regional pesticide policies provides a learning opportunity. As a point of departure, the early adopting CILSS member countries provide a window for exploring how the Sahelian countries managed to implement regional pesticide policies, even in countries with low levels of human and physical capital. Lessons there should help to pinpoint ways in which ECOWAS can improve future country implementation of regional inputs policies more broadly throughout the West Africa region.

1.2. Objectives

The Ghana case study aims to achieve the following goals:

- provide a profile of the structure and dynamics of local pesticide markets
- examine the status of national implementation of regional pesticide policies
- identify gaps and problems in implementing regional pesticide policies

In a second phase, by comparing these results with case study findings from other countries in the region, this work aims to help understand why some countries move rapidly to implement agreed-upon regional policies, while others move slowly or not at all. Ultimately, these comparisons aim to help identify key factors favoring country-level implementation of agreed-upon regional agricultural policies in West Africa.

1.3. Methodology of the study

The present study constitutes one of seven companion national studies of regional pesticide policy implementation in West Africa. The countries examined include three longtime CILSS members (Mali, Senegal and Gambia) as well as four coastal ECOWAS members expected to participate in the newly designed humid zone pesticide regulatory body (Côte d'Ivoire, Ghana, Guinea and Nigeria). Using a standard research protocol, the research team in charge of the each country has spent one week conducting interviews with national regulators and key private sector importers, distributors and retailers and users of pesticides in August 2016. Annex 3 provides the full research protocol applied during these case studies, including market profiles, respondent selection and interview guide, while Annex 1 provides a list of persons interviewed in Ghana. In addition to detailed discussions with regulators and private sector actors, the authors have analyzed available secondary data on pesticide prices, import quantities and farm-level adoption.

2. GHANA PESTICIDE MARKET PROFILE

Ghana grows a variety of crops in various climatic zones ranging from dry savannah to rainforest. The main food crops are maize, rice, yams, cassava and other tubers. The major industrial crops are cocoa, palm oil, cotton, rubber, sugar cane and tobacco. Farmers also grow fruit trees (mangoes) and a lot of vegetables: tomatoes, pepper etc. However, some farmers are faced with shortages of agricultural inputs and difficulties in moving agricultural products to markets (<http://ghanaembkin.org/eng/agriculture>). Insect pests, weeds and diseases are the main biological constraints in crop production in Ghana. Therefore lots of pesticides are used as a remedy against pests and also to solve shortage in manpower.

2.1. Product Composition

In Ghana, marketed pesticides are registered by the Environmental Protection Agency (EPA). In 2015, EPA had authorized 508 pesticides; 391 were fully registered and 117 provisionally cleared for sale (Table 1). The list of pesticides authorized by EPA is presented in Annex 2. Of the 508 pesticides authorized in 2015, about 95% consist of insecticides, herbicides and fungicides. The remaining 5% represent biocides, plant growth regulators, nematocides, adjuvants, rodenticides and molluscicides (Table 1). Among the registered pesticides, herbicides have the largest number but this is not very far from that of insecticides.

Comparison of previous approvals for 2006 and 2011 shows a marked increase in the number of pesticides authorized by EPA. The figures almost doubled between 2006 and 2011 and between 2011 and 2015 (Table 1a and 1b). This indicates a growing interest in the registration of pesticides but also a certain ease of the approval process according to many players in the pesticide sector. In 2013, insecticides accounted for 47%, followed by herbicides with 37%. Two years later, this trend was reversed. This could be due to factors such as shortage of labor in agriculture. (Toé A. 2013).

The Ghana case study was conducted in the localities of Tamale, Kumasi, Tema and Accra where we interviewed a total of 12 pesticide suppliers comprising of importers, wholesalers and retailers (Appendix 1).

In Tamale, we identified 12 non-selective herbicides which constituted 92% of glyphosate brands and 33 selective herbicides (Table 2). According to the Tamale retailers we spoke with, all pesticides sold in Ghana are authorized by EPA. In this locality, the selective herbicides are used mainly on maize and rice which are the main crops grown in this region. Very few pesticides are sold for use on cassava, yam, cotton, soybean, groundnut and oil palm.

The best-selling non-selective herbicides are glyphosate brands (Table 2a). They are products from Jubaili Agrotech, Wynca Sunshine, Ganorma and LDC. The best-selling selective herbicides are used on maize and rice.

The number of insecticides sold (11 products) amount to only one-third of the number of selective herbicides (32 products). Few fungicides, nematicides and growth regulators are sold in this region (Table 2).

In Kumasi, a more humid area than Tamale, the list of non-selective pesticides is longer for glyphosate and paraquat brands (Table 3). Selective herbicides sold in Kumasi are used mainly on maize and rice but also on vegetables (tomato, pepper and sweet pepper) which are produced in large quantities in this area. The number of insecticides sold in this area is higher than in Tamale.

According to farmers, many insecticides are used on vegetables (tomato, pepper and sweet pepper). Like the northern area, few fungicides are marketed in Kumasi. In this area, we did not identify nematicides and growth regulators. The best-selling non-selective and selective pesticides are trademarks of Wynca sunshine, Kumark, Remaco (Table 3a).

Chemico in Tema sells about 25 types of pesticides; the most important ones are listed in Table 4 and 4a. Chemico imports products that have been formulated elsewhere (mainly in China) and reconditions them in their factory in Tema. Reconditioning involves transferring the products from large containers (up to 10,000 liters) and repackaging them in smaller containers (usually 1 liter, 500 ml or 250 ml) for retail sale. No chemical processing is involved. Chemico sells only products of its brands. Herbicides are the most numerous, followed by fungicides and insecticides (Table 4).

In Accra, pesticide categories sold seem to be balanced between herbicides, insecticides and fungicides (Table 5). Distributors generally refer to active ingredients instead of commercial products. Non-selective herbicides are mainly distributed by Chemico and Wienco which appear to be dominating the market (Table 5a). Wienco Agriculture is an association of specialists in agriculture covering Ghana, Ivory Coast, Senegal, Liberia, Togo, Mali and Burkina Faso. Its objective is the protection of crops, promotion of good quality seeds, irrigation and compliance with the regulations on pesticides and seeds, Wienco's approach is by sector (eg Rice sector, Maize sector, Cocoa sector, etc.).

Registration and sale of glyphosate increased very rapidly from 2006. The number of glyphosate marks authorized in 2015 is almost 7 times higher than in 2006. The sale of glyphosate is a prosperous activity and all distributors invest in this area. It is not uncommon to note that almost every distributor has its own brand.

The proportion of provisionally cleared glyphosate has also increased from 16.7 % in 2006 to 40 % in 2015. The duration of provisionally cleared pesticide is for a maximum of one year and is non-renewable. This raises the question whether these provisionally cleared glyphosates are then fully registered or whether the distributors change product names and submit a new dossier to EPA for approval. From the list of authorized pesticides, this is not easy to follow.

Table 6. Timetable of glyphosate brands registered for sale in Ghana

Year	FRE	PCL	Total
2006	10	2	12
2011	23	12	35
2015	42	28	70

Source: Etude UEMOA 2006, Directory of Ghana Agri-input dealers 2012, Ghana gazette 2016

To improve the pesticide sector, stakeholders in the sector suggest:

- Importing better quality pesticides

- Do not import pesticides with a near expiry date
- Improve compliance with the law

The solutions are:

- training agro-dealers and farmers

2.2. Farm-level demand for pesticides

In Ghana, agriculture employs about 50% of the workforce. [Ernest Aryeetey & William Baah-Boateng 2016]. Indeed, it plays a crucial role in feeding the population, creation of national wealth, employment and income, and contributes to over 60% of gross domestic product (GDP). About 15.3% to 30% of total exports of goods and services are agricultural commodities. The sector provides both formal and informal employment. Ghana has a variety of crops in various climatic zones ranging from dry savannah to rainforest. Agricultural crops, including yams, cereals, cocoa, oil palm, cashew and cola nuts as well as wood, form the basis of agricultural activities in Ghana. Ghana has a warm tropical climate and is subdivided into three main geographical zones:

1. the coastal belt traditionally for fishing and small farming;
2. the forest area : about one third of the country is the main agricultural area. Cocoa, beans, rubber, sugar cane, oil palm, yam, cassava and are grown;
3. the northern savanna : suitable for breeding of livestock as well as for rice, maize, millet, shea and cola nuts (: <http://www.our-africa.org/ghana>)

However, farmers are faced with shortages of agricultural inputs and difficulties in moving agricultural products to markets. (<http://ghanaembkin.org/eng/agriculture>)

The major industrial crops are cocoa, oil palm, cotton, rubber, sugar cane and tobacco. All the cocoa production, with the exception of cocoa coming out clandestinely from the country, is sold at fixed prices. The government controls the industry through the Ghana Cocoa Board (Cocobod). (: <http://ghanaembkin.org/eng/agriculture>). Cocoa is the most valuable agricultural export for Ghana, which was the third largest producer in the world in 2010 (: <http://www.our-africa.org/ghana>)

The use of herbicides, insecticides and fungicides in Ghana was studied in 2009 (Table 7). This study showed that herbicides are the most heavily used pesticide in Ghana Forty percent of farms use herbicides on at least one plot, while one-third use insecticides and only 5% use fungicides (Table 7). This farm-level evidence confirms the aggregate import data suggesting that herbicides are in the lead (Table 1).

Table 7 Pesticide use during the main season in Ghana, 2009 (%)

Input	Percent using inputs	
	plots	farms
herbicide	26	40
insecticide	20	33
fungicide	3	5

Source: Ghana LSMS 2009, Input use on each plot and farm during the main agricultural season. Total sample size = 2,972 plots and 1,303 farms.

During our field visits in August 2016, the use of pesticides has been assessed on the basis of farmer interviews in Tamale and Kumasi. Tamale is located in the northern region of Ghana. Annual rainfall varies from 1,000 to 1,500 mm. Crops grown there are:

- Cereals: rice, maize, sorghum and millet;
- Food legumes: soybeans, cowpeas, peanuts and pigeon pea;
- Tubers: yams, cassava and sweet potatoes;
- Fruit trees: mango, cashew, shea

In Tamale, in the locality of Nabogu (District Savelugu Nanton) Northern Region, we interviewed five farmers with two women practicing the following crops:

- Maize (1.62 to 2.43 ha / person)
- Rice (0.81 - 1.21 ha / person)
- Groundnut (0.81 ha)

Farmers interviewed indicated that they have been growing these crops for 10 to 20 years. For maize, farmers use Kondem (glyphosate) before seeding to destroy existing weeds on their fields. After sowing and before emergence of maize, they use a combination of Nico-Plus and atrazine. The farmers mix the two active ingredients together and spray them on their fields simultaneously. Effectively, the farmers prepare specially tailored formulations they consider most appropriate for their particular circumstances. According to them, this combination takes care of the weeds for a long time. Weeds growing in plots after these treatments are removed by hand.

Kondem 41 SL (glyphosate) is provisionally authorized by EPA since December 2015 for a maximum period of one year. Herbimaize (nicosulfuron / atrazine combination) is approved by EPA. When Herbimaize is not available locally, farmers make their own combination. This explains why farmers in this locality use Nico-Plus and Atrazine.

For rice, farmers use a combination of Kondem / Butachlor after sowing and before rice has emerged. According to them, Kondem (glyphosate) will control existing weeds and Butachlor will take care of weeds in the germination phase. After weed emergence, farmers applied Megastar twice in the growing season to control emerged weeds. This product is not authorized by EPA.

Most retailers we interviewed maintained that they only sell pesticides approved by the EPA. However, several well-established local traders complained bitterly about the existence of “fake” products on the market and several showed us examples. One noted that he had conducted efficacy trials on some of these products, concluding that several of the fraudulent, unregistered pesticides were ineffective. Despite these complaints, we were unable to obtain reliable estimates of the share of unregistered pesticides currently on sale in Ghana. However, the inventory of glyphosate products sold on the markets in 2016 shows that about 28% were not registered (Appendix 6).

Farmers use very few insecticides but the most common insecticide used are those containing lambda-cyhalothrin or pyrimiphos-methyl).

We visited the rice plots of the two peasant women. The rice was in good condition and did not show a heavy infestation of weeds but rather an irregular application of fertilizers. Women buy fertilizer for 0.4 ha and apply it on 1.2 ha.

In the locality of Duko (District Savelugu Nanton) Northern Region, we interviewed two farmers practicing the following crops:

- Maize (1.62 - 2.43 ha)
- Soybeans (0.81 ha)
- Rice (0.40 ha)
- Peanut / Cowpea (0.4 - 0.81 ha)
- Millet (0.4 ha)
- Tomatoes
- Sweet pepper and pepper

Pesticides used by these farmers on their crops are:

- For maize: Sarosate (glyphosate) is used before planting, Sun-atrazine powder at pre-emergence and Stomp or Kabaherb (2, 4-D) at post-emergence (if required). Empty containers are buried or burned in the field.
- For soybeans: Sarosate is used after plowing and just after sowing. Weeds growing in the plots are then removed manually.
- For rice: Sarosate / Butachlor are used pre-emergence and Bison rice (bispyribac-sodium) is applied post-emergence of the rice.

Pesticides are purchased in Kanshegu or Savelugu. Applications of pesticides are made by the Adventis Development Relief Agency (ADRA).

In Bekwai, a town near Kumasi, we interviewed three farmers. One of them was a pesticide dealer and a teacher. Crops grown by them were:

- Okra / Sweet pepper / Eggplant
- Sweet pepper / Cabbage
- Cocoa

To control weeds, prior to planting of their crops, these farmers use several glyphosate and paraquat brands shown to be very effective. These are:

- Glyphosate brands (Adwura (Kaakyidu) Sunphosate (Wynca sunshine), Roundup (Dizengoff) and Kalach (Callighana) and
- Paraquat brands (Grammapack (Kumark), Grammosharp and Gramoxone (Dizengoff))

They did not cite any selective herbicides used on these crops. This is understandable given the small size of their plots for vegetables. The pesticides used on cocoa do not appear to be numerous on the market. The orders are placed by the Cocoa board and are sold directly to the producers. Their main crops being vegetables, many insecticides such as Super-lambda, Sunpyrifos, Confidor, Goland, Coincidia and Sumitox are used quite frequently.

According to PPRSD technicians, the major constraint to pest management is the misuse of pesticides. Farmers use manually operated backpack sprayers. These sprayers are mostly of poor quality (leakage problems), and the farmers are mostly illiterate. They can't read labels in order to follow instructions. To help solve this problem, three projects have been set up for training of farmers. These are:

- Advanced project: USAID
- ADRA: Adventis Development Relief Agency, Adventist Church
- Agricultural Value Chain Membership Project.

Our farmer's interviews confirmed the results of the LSMS study conducted in 2009 where herbicide comes in the first place among pesticides used in farmland. In Ghana, products containing atrazine and paraquat are allowed by EPA but they are prohibited for use in the CILSS member states. Most of these products are found in CILSS countries and could explain the unofficial importation from Ghana.

Recent evidence suggests that herbicide use in some parts of Africa is reaching significant levels and may be on the rise more generally. In Ghana, recent studies have shown that herbicides were applied on 73% of maize plots, were used by 61% of yam farmers, and represent 44% of all applied chemicals to vegetables. Herbicide use has increased dramatically in Ghana from 4% in 1998 to 55% of farming households in 2013. In Ghana, herbicide use is also higher among younger farmers and in communities that are farther from extension centers, where there are tractors, and where farming is the primary economic activity. The results of these studies suggest that increased use of herbicides is driven by increased awareness, availability and demand by better off commercially oriented households. This often happens in areas where agricultural productivity is rising and where the opportunity cost of labor may be higher. Based on this analysis, herbicide use is expected to increase in areas where agriculture becomes commercial.

Herbicide use rates are generally increasing but vary widely by country, from 1% in Malawi to 55% in Ghana. (Grabowski et al. 2016). Policies to prepare for these changes should include training of farmers on safe and effective application of pesticide and monitoring for contamination in waste supplies (Grabowski et al. 2016).

2. 3. Distribution system

Fig. 1 Pesticide Supply System Structure in Ghana

In the past, Chemico in Tema imported active ingredients and formulated pesticide products in its factories. Today these factories do not work and Chemico imports already formulated pesticide and recondition them in its factories. It seems that Wynca Sunshine is planning to build a pesticide formulation plant in the vicinity of Kumasi. At the passage of the mission, it was not possible to visit this factory.

Currently, firms in Ghana do not formulate⁴ pesticides (Table 8). Instead, they import ready-to-use formulations. Ghana's pesticide needs are met by imports which require an import permit issued by EPA. According to the distributors, no pesticide can officially enter the Ghanaian territory without this license. However, the requirements to obtain pesticide import licenses are not difficult to fulfill. This means that the import of pesticides does not require any prior training

⁴ Formulation involves combining premanufactured active ingredients with various additives that improve application, adherence and effectiveness of the pesticides.

of distributors, thus causing a problem at the distributor level. Many distributors are in the industry without any training on pesticides.

According to CropLife, the volume of pesticide imports to Ghana was 2.5 million tons, including a certain amount in transit for Côte d'Ivoire, Burkina Faso and Togo. Mali is not mentioned among these countries, but there are pesticides from Ghana in Mali. This could be introduced through Côte d'Ivoire or Burkina Faso.

During the field mission, we were able to interview 13 of the 20 listed major pesticide importers in Ghana (Table 8). Among these importers, the most cited ones were:

- DIZENGOFF
- LDC
- CALLIGHANA
- SARO
- WYNCA SUNSHINE
- KUMARK TRADING COMPANY
- REMACO
- JUBAILI
- CROPSTAR
- CHEMICO

During our interview with Wienco Agriculture, it was reported that RMG was the first importer of insecticides in Ghana in terms of volume and also the first importer of Glyphosate. It also imports a lot of fungicides. Its product sales in 2015 were of the order of 45 million Ghana Cedi with the breakdown as follows:

- Insecticides: 30 %
- Fertilizer: 25%
- Seeds: 12%
- Glyphosate 10%
- Others: 23%

RMG has nearly 150 licensed distributors throughout the country. It has an office for the registration of its products. This office recruits researchers for the experimentation of RMG products. However, it is surprising that RMG is not cited as an importer.

Kumark imports and distributes annually 60 pesticides containers throughout Ghana. He does not consider himself a retailer. 50 of the imported containers are glyphosate brand Adwummawura. According to him, his imported pesticides amounted to 80 containers (960 tons) in 2015.

Jubaili, an importer and wholesaler of agricultural goods moved to Ghana in 2014. Its main office is in Kano, Nigeria. It imports and distributes pesticides, fertilizers, seeds and sprayers. It imports and distributes 15 to 30 pesticide containers per year. Its pesticides are mainly imported from China, Europe and India.

Some older pesticide importers such as Sefa and Jane Agro Enterprise, listed last in the list of importers (Table 8) and Yaw Owusu Berko Obeck Agro Services Ltd., not listed in Table 8 consider themselves as importers, distributors and retailers in the Ashanti region of Ghana. Their pesticides are imported from China and India. Pesticide prices are lower in China than in India. Their products are sold to farmers, farmers' associations, other users and NGOs on an occasional basis.

Sefa and Jane Agro Enterprise and Obeck Agro Services Ltd are today discouraged by the multitude of stakeholders in the pesticide industry. According to them the entry of pesticides in Ghana is very easy. All you need is a document from EPA and the market is flooded with pesticides.

New importers such as Ganorma Agro-Chemicals Ltd, who started pesticide importation in 2015, from China and Germany, are very enthusiastic. Fifteen years ago, he was a pesticide retailer, then a wholesaler. He is currently an importer, wholesaler and retailer of agricultural inputs: fertilizers, seeds and pesticides. He distributes his products in nearly all districts of Ghana. The main products he distributes are more than 20 brands of glyphosate, mainly sold to more than 80% retailers.

Of the 25 small importers presented in Table 8, some are well known in Mali: Ets Issa Mory DEMBELE Comptoir 2000, Adama West Africa Limited and Rainbow AgroSciences Company Ltd. Table 8 presents also a multitude of permanent distributors such as Makhteshim Agan West Africa, well known in Mali

Greater Accra	Accra, Madina, Tema	Ashiaman, Ada

2.4. Markets trends

2.4.1 Trends in volumes of pesticides imported into Ghana

From 2004 to 2015, Ghana imported an average of 9,216 tons of insecticides, 8,986 tons of herbicides and 2,545 tons of fungicides (Appendix 4). From 2004 to 2007, imported herbicides and fungicides were lower than that of insecticides at the same period (Fig 2). From 2007, import of herbicides has increased and exceeded that of insecticides and fungicides and continues to progress with declining imports noticed from 2012 to 2014. The import of fungicides is lower than that of insecticides and herbicides throughout the period 2004 to 2015.

The increase in the importation of herbicides could be explained mainly by the reduction of labor force for agriculture in general and the mastery of the application of plant protection products by farmers. In Ghana, there are trained pesticide applicator brigades that handle the application of pesticides in farmers' land. The pesticide applicators training program was initiated in 2013 with support from CropLife Ghana and to date 2,300 applicators have been trained. This activity is part of CropLife global program on safe use of pesticides. Pesticide applicators are outside the Government. They are villagers who are trained in pesticide application techniques by various Ministry of Food and Agriculture agencies, projects and programmes.

Fig 2. Quantity (tons) of pesticides imported into Ghana from 2004 to 2015

Source: Source: EPA, PPRSD / MOFA, 2015;

2.4.2. Price Trends

The average import price of pesticides from 2006 to 2015 was 17.56 Cedi per liter for fungicides, 10.74 for insecticides and 8.88 for herbicides (Table 3a). Pesticide import prices are up from 2006 to 2015. Fungicides are the most expensive, followed by insecticides and herbicides are the cheapest (Figure 2).

In the domestic market, the average price of pesticides was 20.39 Cedi per liter for fungicides, 13.18 for insecticides and 10.75 for herbicides (Table 3b). During the period 2006 to 2015, Pesticide prices follow the same trend as import prices (Figure 3).

The 2006 to 2015 profit margin between the local market price and the import price ranges from 2.83 Ghana cedis for fungicides, 2.44 Ghana cedis for insecticides and 1.87 Ghana cedis for herbicides.

The distributors interviewed did indicate that herbicides were cheaper than insecticides and fungicides. They also indicated a downward trend in the prices of herbicides and insecticides. This downward trend may partly explain the massive importation and use of herbicides. It should also be noted that herbicides: especially non-selective ones are used for the installation of all crops while insecticides and fungicides (especially for seed treatments) are used on specific crops. Herbicides are also used in perennial crops (Cocoa, Oil Palm) to control weeds and facilitate harvesting. Demand is high for countries where rainfall is high : more than 1.500 mm of rain per year.

Fig. 3. Average price (000 Ghs / liter) of pesticides imported to Ghana from 2006 to 2015

Fig 4. Average price (000 Ghs / liter) of pesticides in the domestic market in Ghana from 2006 to 2015

Source: field data collected from importers August 2016.

3. REGIONAL PESTICIDE POLICIES

3.1. ECOWAS regional pesticide policy

To facilitate the development of agricultural trade, ensure the quality control of the products traded, and realize the 2020 vision of ECOWAS, the ECOWAS Commission through its Directorate of Agriculture and Rural Development has developed, in consultation with other regional organizations (WAEMU and CILSS), several regulations including the Regulation No. C/REG.3/05/2008 on the harmonization of rules governing the approval of pesticides in the region and develop associated implementing regulations (Source: Diarra 2016 Study MSU). The objectives of this pesticides regulation are:

- To protect people and the environment in West Africa against the potential dangers of pesticide uses
- To facilitate pesticide trade within and between member States by applying regionally agreed upon rules that minimize trade barriers
- To facilitate farmers access to good quality pesticides in time and place
- To contribute to the establishment of a favorable environment for private investment in the pesticide industry
- To encourage partnerships between public and private sectors.

The organs of this pesticide regulation are:

- The setup of the West African Committee for Pesticide Registration (WACPR) in order to ensure the implementation of the regulation on behalf of the ECOWAS Commission
- The setup or the revitalization of National Pesticide Management Committee (NPMC) in each Member State for the development of the pesticide sector The NPMC is essentially responsible for pre-registration (experimentation) and post-registration (surveillance)

The management instruments of this pesticide regulation are made of five pesticides lists:

1. List of fully registered (FRE) and provisionally cleared pesticides (PCL)
2. List of severely restricted pesticides;
3. List of pesticides under toxico-surveillance
4. List of prohibited pesticides;
5. List of registered pesticides identified in each Member State.

3.2. Implementation requirements for ECOWAS

At a regional information and exchange workshop on the implementation requirements of ECOWAS pesticide regulation it was recommended that each Member State should:

- Publish Regulations in Official Journals
- Draft and adopt texts complementary to Regulations
- Establish and operationalize national committees (pesticides)
- Prepare and publish the different lists of pesticides
- Implement an Information Strategy on Regulations

- Finalize the action plans related to the implementation of the Regulations (Pesticides)

The second recommendation was to draft and adopt texts complementary to the regional regulations. This requires action by both ECOWAS and the national governments. The ECOWAS commission is responsible for drafting and approving implementing regulations. Subsequently, Ghana and other member states are responsible for preparing supplementary national texts that align with the regional regulations. These national implementing regulations cannot be implemented until the ECOWAS Commission drafts and adopts the governing regional regulatory texts.

The law 490 of the year 1994 regulates pesticide management in Ghana (Table 10). In 1996, the Pesticide Management and Control Act 528 provides for the control, management and regulation of pesticides in Ghana. This Act has now been incorporated in the EPA Act 490. It describes the import procedures, registration, sale and destruction of pesticides in Ghana.

ECOWAS pesticide regulation is well known in Ghana, but it seems that politicians and technical staff regulators do not consult enough to advance the inclusion of the Regional Regulation on pesticides in the National Regulations. In some instances, it appears that participants who attended regional meetings did not fully inform technical staff charged with implementation of regional agreements. In the early years following the 2008 ECOWAS ministerial agreement on regional pesticide regulations, it appears that some operational staff in Ghana resisted implementation of the new regional regulations on the grounds that national systems were working well and that change was therefore unnecessary. Since 2014, however, the political leaders and technical agencies in charge of pesticide regulation have agreed to move forward with national implementation of the regional pesticide regulations.

ECOWAS pesticide regulation is not published in the national gazette. It seems that any law would not be published in the national gazette unless it has been adopted by Parliament.

The different pesticide lists are published in the national gazette. The 2016 national gazette is published in February by EPA. It contains the lists of:

- Fully Registered Pesticides
- Provisionally Cleared Pesticides
- Banned Pesticides

This gazette is published and updated twice a year.

Table 10. Policy chronology: national and regional pesticide regulations

Policy actions	Legal texts	Comments
Establishing the Environmental Protection Council (1974)	NRC Decree 239	On 23 January 1974 the head of state signed NRC Decree 239, establishing the Environmental Protection Council
Harmonization of pesticide management in West and Central Africa (1993) HIP Project	No legal text	HIP project included Benin, Côte d'Ivoire, Ghana, Guinea and Togo. It was expected to add Liberia, Nigeria and Sierra Leone. The harmonization concerned Pesticide Registration instruments (experimental protocols, registration dossier, Labeling, Advertising etc)
The National Environmental Policy (NEP)		NEP is based on a number of principles that aim to ensure that the policy effectively achieves its objectives. These include the use of the most cost-effective means to achieve environmental objectives
Environmental Protection Agency Act, 1994	Act 490	An Act to amend and consolidate the law relating to environmental protection, pesticides control and regulation and for related purposes.
Pesticides Control And Management Act, 1996,	Act 528	An Act to provide for the control, management and regulation of pesticides in Ghana and to provide for related matters. This Act has now been incorporated in the EPA ACT, 1994, Act 490.
Harmonization of Pesticide Registration in West and Africa (ECOWAS Regulation)		This process is currently in discussion in Ghana. EPA is in preparation to lead consultations on the harmonization process. No published Act
EOWAS Pesticide implementing regulations not yet available		EPA and the Attorney Generals Department are currently drafting five (5) legal documents since 2014. These are; <ol style="list-style-type: none"> 1. Draft Pesticide (Advertising) Regulations 2. Draft Pesticide (labeling and Packaging) Regulations 3. Draft Pesticides (Licensing) Regulations 4. Draft Pesticides (Registration) Regulations 5. Draft Technical Guidelines for Pesticides Transportation, Storage and Disposal

4. IMPLEMENTATION OF REGIONAL PESTICIDE REGULATIONS BY GHANA

4.1. Ghana's legal framework

The Environmental Protection Agency Act, 490 of 1994 mainly regulates pesticides in Ghana. This Act does not take into account the regional ECOWAS Regulation on pesticides. The harmonization process with the Regional Regulation of ECOWAS on pesticides started in 2014 and five (5) technical implementation regulations are being developed by EPA and the Attorney Generals Department (Table 9). The rigidity of the parliamentary calendar is a major constraint to the adoption of any regional legal texts in Ghana. One should consider at least 3 years for a legal text to be taken by parliament in Ghana. However, if a political change occurs when a text is entered, the whole process will have to be started again.

It is usually easier to write a new law than to implement it, but in Ghana it seems that the implementation of law is easier than its formulation because new laws are extremely difficult to take.

4.2. Operational implementation of pesticide regulations

4.2.1 Pre-registration

Pre-registration is essentially driven by EPA (Fig. 5). Pesticide import procedures in Ghana for both experimentation and distribution are the responsibility of EPA, which is under the Ministry of Environmental Science and Technology.

EPA is responsible for the licensing of pesticide experiments. Bio-efficacy trials for registration purposes are carried out by public institutes belonging to the CSIR (Council for Scientific and Industrial Research), public universities and private institute belonging to the Cocoa Research Institute in collaboration with the EPA. EPA contracts the testing services with the public or the private institutes. The CSIR remains the largest institution in charge of scientific research in Ghana. At present, the Council exercises control over thirteen institutes where three are involved with conducting experiments for registration of pesticides: CRI (Institute for Crop Research), OPRI (Oil Palm Research Institute) and SARI (Agricultural Research Institute of the Savannas (SARI)).

The PPRSD: representing the Ministry of Agriculture is partly responsible for the supervision of field trials. But this task is not systematic because there is no collaboration agreement with EPA and CSIR

4.2.2. Registration

EPA is responsible for pesticide registration in Ghana. The Secretariat of the Pesticide Registration Committee is provided by the Chemical Control and Management Center (CCMC) housed within EPA (Fig. 5). EPA is represented in each of the pesticide registration

subcommittees through two representatives. The PPRSD is a member of the Pesticide Registration Committee and is represented in two subcommittees. The Pesticide Registration Committee meets every 3 months and EPA publishes four times a year the list of fully registered pesticides, those with a Provisional Clearance and those prohibited. That of December 2015 is available and was published in the official gazette Nr 15 of February 8, 2016. Pesticides are registered for duration of 3 years renewable. Pesticides are provisionally cleared for a maximum of one year and the clearance is not renewable. ECOWAS recommend duration of 5 years renewable for fully registered pesticides. Pesticides under Provisional Clearance status are registered for three years and this is not renewable.

.Fig.: 5. Organizational structure of EPA Ghana for the registration of pesticides

The Pesticide Registration Technical Committee reviews pesticide registration applications 4 times a year. Decisions are forwarded to the EPA Board of Directors for approval.

Civil society: the Association of Agricultural Chemical Distributors and the National Association of Farmers and Fishermen of Ghana is well represented on the Pesticide Registration Committee in Ghana, notably on the Labeling and Advertising subcommittee. In other areas of West Africa (CILSS), the Civil Society is not represented in the pesticide registration committee.

4.2.3 Post-registration

According to the law 490 of the year 1994 which regulates pesticide management in Ghana, post-registration activities are the responsibility of EPA. Post-registration activities are carried on the ground by EPA and the PPRSD. This Act describes the import procedures, registration, sale and destruction of pesticides in Ghana. For post-registration activities, thirteen institutions from seven (7) ministries are involved (Table 12). The MoFA Veterinary Services Directorate and the Forestry Research Institute which are not represented on the Pesticide Registration Technical Committee, are involved in post-registration.

The challenges of post-registration activities are:

- illegal operations,
- poor infrastructure,
- lack of training : farmers and dealers
- lack of adequate logistics.

But pesticide inspection focuses on inspection of shops and pesticide dealers. In its farmer training program, the PPRSD focuses on personal protective equipment (PPI) and management of empty containers. The official pesticide quality control services do not play their roles in the implementation of national policy in the ground. This is due to many factors, including:

- The Act 528 taken in 1996

The merger of this Act with the 490 Act was initiated without consultation with key organizations. The PPRSD which is a key body in the implementation of the Pesticides Act in Ghana has submitted requests for the restitution of Law 528, but this has not been done.

Table 11: Implementing structures, regulatory functions and staffing in Ghana

National implementation requirements	Status of implementation in the country, including structures and staffing
1. Pre-registration	
<ul style="list-style-type: none"> • Field testing of pesticides proposed for registration 	<ul style="list-style-type: none"> • The EPA Pesticide Technical Committee (PTC) is responsible for evaluating all field-based efficacy trials for all pesticides proposed for sale in Ghana and this is usually practically and effectively done through its sub-committee on Bio-efficacy which is made up of experts from diverse backgrounds. These include MoFA, Research institutes.
<ul style="list-style-type: none"> • Establish the Environmental Protection Agency (now Environmental Protection Authority (EPA)) 	<ul style="list-style-type: none"> • Established in 1994 by ACT 490 • The Board and its technical committees meet quarterly (38 meetings so far)
2. Registration	
<ul style="list-style-type: none"> • EPA approves or disapproves pesticides 	<ul style="list-style-type: none"> • In Ghana, the EPA Board approves or disapproves pesticides based largely on results of field trials and dossiers submitted to the committee for verification.
3. Post-registration	
<ul style="list-style-type: none"> • register and monitor traders eligible to sell pesticides 	<ul style="list-style-type: none"> • EPA is mandated by law to registers all pesticide products brought into Ghana. This is largely carried out. • EPA also has a register of all registered pesticides dealers in Ghana. There is also some unregistered traders who sell pesticides in Ghana
<ul style="list-style-type: none"> • market monitoring to verify that traders sell only registered pesticides, verification of labeling and product expiration dates 	<ul style="list-style-type: none"> • EPA and PPRSD inspectors carryout periodic monitoring of Pesticide dealer shops to determine pesticide distribution and trade activities throughout the country to ensure enforcement of the EPA Act 490. The staff in 2013 included : EPA/CCMC 15 B.Sc Environmental Science MOFA/PPRSD 25 Cropscience ; Environmental Science • Limited travel and enforcement budget • limited capacity to store seized products • There is a comprehensive list of registered and provisional clearance products published by EPA annually.
<ul style="list-style-type: none"> • test active ingredients and product quality 	<ul style="list-style-type: none"> • No capacity, no testing conducted in Ghana. Some importers like RMG conducts some tests abroad through their manufacturers
<ul style="list-style-type: none"> • monitor environmental impact 	<ul style="list-style-type: none"> • EPA carries out environmental impact assessments on products. These are largely done through projects whose activities include pesticide use
<ul style="list-style-type: none"> • monitor impact on human health 	<ul style="list-style-type: none"> • The national poison center located at the Ridge Hospital in Accra does periodic poison checks and also liaises with projects to fund some monitoring activities.

Table 12: Institutions involved in control and pesticides management in Ghana

Institutions and / or Services	Ministries concerned	Specific roles
Environmental Protection Agency (EPA)	Ministry of Environment, Science and Technology	Implementation of pesticide legislation in Ghana Issues import permits Delivers experimental license Coordinates bio-efficacy field trials Coordinates pesticide registration (all phases of pesticide registration)
Plant Protection and Regulatory Services Division (PPRSD)	Ministry of Food and Agriculture (MoFA)	Responsible for training farmers and pesticide suppliers on safe use and providing pesticide inspectors for the implementation of the provisions of the Pesticides Act in Ghana Intervenes in bio-efficacy tests Controls distributors and markets for pesticides
Crop Research Institute (CRI) Agricultural Research Institute of the Savannas (SARI)	Council for Scientific and Industrial Research (CSIR)	Evaluation of the biological effectiveness of pesticides on crops
OPRI (Oil Palm Research Institute)	Council for Scientific and Industrial Research (CSIR)	Evaluation of the biological effectiveness of pesticides on oil palm
Cocoa Services Division COCOBOD	Ministry of Finance	Control and management of cocoa pesticides Evaluation of the biological effectiveness of pesticides on cocoa
Department of Chemistry, National Institute for Nuclear Research, Ghana Atomic Energy Commission	Ministry of Environment, Science and Technology	Analysis of pesticide quality
Ghana Standards Council	Ministry of Commerce	Control of pesticide quality and residue analysis
Customs, and Preventive Service	Ministry of Commerce	Control the import of unregistered pesticides
Forestry Research Institute	Ministry of Lands and Natural Resources	Responsible for pesticides used for the treatment of wood
Directorate of Veterinary Services of MoFA	Ministry of Food and Agriculture (MoFA)	Pesticides used for veterinary purposes
Health services in Ghana	Ministry of Health	Pesticides used for the control of disease vectors and for public health in general
National Association of Farmers and Fishermen of Ghana	Ministry of Employment and Social Welfare	Ensure availability of safe and effective pesticides for agriculture
Association of Industries in Ghana	Ministry of Employment and Social Welfare	Represent the interests of the pesticide industry
CropLife Ghana	Ministry of Employment and Social Welfare	Advocacy for improved control and management of pesticides, training of pesticide traders

4.3. National implementation of regional pesticide regulations

Ghana has not yet begun to implement regional pesticide regulations. The government, however, has set up a national task force to institute necessary legal, regulatory and institutional changes. Prior work by Ghana's seed and fertilizer task forces have completed and submitted necessary legislation to Parliament, permitting national implementation of these two regional agricultural input agreements. However, work on pesticides has proceeded more slowly. Currently, technical staff at Ghana's EPA are working with ECOWAS and CILSS to draft the legal and regulatory instruments necessary to establish a national pesticide committee and full complement of harmonized local regulations.

Ghana's efforts depend, to some extent, on prior technical decisions and implementing actions by ECOWAS, including the operational establishment of the regional Committee for West African Pesticide Registration (CWAPR). As a result, Ghana's national implementing regulations cannot be implemented until the ECOWAS Commission drafts and adopts the governing regional regulatory texts and operationalizes the proposed regional pesticide bodies.

5. CONCLUSIONS

Market trends

The results of this study indicate that the import of pesticides into Ghana is clearly increasing. The same is true for the increased use of pesticides mentioned in other studies. Factories that once formulated pesticides saw their activities reduced to mere repackaging. As a result, Ghana imports all of its pesticide requirements. New companies such as Wynca Sunshine intend to formulate pesticides on site in the near future. The market for pesticides in Ghana is a thriving market given the number of pesticides sold and the number of actors involved in the sector. It is safe to say that Ghana is a pesticide reservoir for the West African sub region. The number of glyphosate brands encountered in Ghana is significantly higher than in the other countries of this study, with the exception of Nigeria. However, in spite of this flourishing market, some former operators of the sector (those of 1980) saw their activities reduced due to problems of importation of poor quality products and also by the simplicity of acquisition of import license of pesticides. This poses risks to human, animal and environmental health. On the other hand the new operators are very dynamic and invest extensively in the import of pesticides mainly from China and India. This does not mean that pesticides imported from China or India are of poor quality but that quality is a function of the customer's resources.

Implementation of regional policies

In the framework of the implementation of Regulation C / REG.3 / 05/2008 on the harmonization of the rules governing the registration of pesticides in the ECOWAS region, EPA has published in 2013 the list of specific ECOWAS protocols for the evaluation of the biological effectiveness of pesticides: Insecticides, acaricides, herbicides, fungicides and bactericides. Since 2014, five (5) technical implementation regulations are being developed by EPA and the Attorney Generals Department.

One can conclude by stating that the implementation of the ECOWAS Regulation on pesticides is not effective in Ghana yet but some implementation documents are being drafted.

Main factors affecting the national implementation of regional policies agreed

The rigidity of the parliamentary calendar is a major constraint to the adoption of any regional legal texts in Ghana. According to several pesticide experts, one should consider at least 3 years for a legal text to be taken by parliament in Ghana. However, if a political change occurs when a text is entered, the whole process will have to be started again. It is usually easier to write a new law than to implement it, but in Ghana it seems that both the implementation of law and the formulation of new laws takes time.

Key implementation problems

The results of this study indicated several implementation problems such as:

- Insufficient staff, logistics and funds for post-registration surveillance

There is insufficient staff and insufficient logistics to monitor pesticide activities on the ground. There is insufficient funding for public awareness programs for farmers and the general public and for pesticide inspectors to monitor fields after registration. The inspectors do not have all the capacity to apprehend fraudsters. The Plant Protection and Regulatory Services Division (PPRSD), responsible for training farmers and pesticide suppliers on safe use and providing pesticide inspectors for the implementation of the provisions of the Pesticides Act in Ghana does not have enough staff, equipment and funds to fulfill its mission.

- No existing national committee on pesticides

In Ghana, there is a Pesticide Registration Committee under the responsibility of EPA. This committee meets regularly four times a year and is very active in the registration of pesticides. Apart from this Committee, there is no National Pesticide Management Committee. All pesticide management activities are coordinated by EPA.

- Pesticide quality control laboratories

There are inadequate facilities for the analysis of pesticide quality control and this makes it difficult to prosecute pesticide traders selling falsified pesticides.

- Toxicological information center

There is currently only one toxicological information center at the Ridge Hospital in Accra. However, the center is currently not functional. (Toe 2013)

Recommendations for improvement

In order to improve the management of pesticides in Ghana, many avenues must be considered, including

- Better control of the pesticide registration process. Better regulate the import and sale of pesticides. All pesticide importers and dealers must be well trained before being permitted to trade in pesticides.
- Control the quality of pesticides at import and on the market. It is not unusual to see the existence of counterfeit or under-dosed products on the market. The construction of a new site for EPA including a pesticide control laboratory is planned outside of Accra. It is advisable to continue this project of building these infrastructure with a view to improving the quality of pesticides in Ghana
- Emphasize training of farmers and pesticide suppliers on safe use of pesticide
- Monitor environmental impact of pesticide on a regular basis.

Appendix 3. Research Protocol and interview guide

a. Private sector interviews

Step 1. Market profile (FP)

a. Collect background statistical data

- Tables 1-10 below

1. List and composition of pesticides sold/authorized in Ghana
2. Trends in volume of pesticides used
3. Price trends (herbicides, insecticides, fungicides)
4. Farmer use of pesticides (based on secondary data)
 - herbicides, insecticides, fungicides
 - selective and nonselective herbicides
5. Inventory of registered and unregistered glyphosate products sold in local markets in Ghana
6. Timetable of glyphosate brands registered for sale locally
7. Major producers, importers and distributors
8. Policy chronology: national pesticide regulations
9. Implementing structures, regulatory functions and staffing
10. List of key markets

b. Summarize market structure and participants

- list of key national pesticide markets
- list key suppliers (importers, producers, distributors, local representatives of major suppliers, regional traders)
- list of key regulators
- list of other important stakeholders

Step 2. Identify priority locations and suppliers for interview (FP +team)

Capital city

N = 5 importers

N = all local representatives of major suppliers

N = all bulk buyers

N = all traders operating regionally

N = 2-4 markets

N = 5 wholesalers

N = all producers

N = 10 retailers

N = 1 trade association

Step 3. Conduct interview with key private sector actors (See Interview Guide below)

b. Regulatory system interview

Step 1. Regulatory system overview

- Policy chronology (Table 8)
- copies of key regulations

Step 2. Identify key domestic institutions and key informants in each

- national pesticide committee
- regulatory bodies
- scientific
- donors, outside support groups

Step 3. Select key informants to interview

N = ?

Step 4. Interview key public sector stakeholders

(See Public sector Interview Guide)

c. Market-level glyphosate information for each market visited

- list all glyphosate products on sale
- purchase 1-liter bottle of each brand sold on the market
- for each product, list the following information
 - Manufacturer
 - Distributor
 - Manufacturing location
 - Homologation (Registration) number (if any)
 - Price per liter

d. Private Sector Interview Guide

1. Business profile

- when did you start selling/importing pesticides ?
- what major pesticides do you sell?

Tableau 1

	Non Selective	Selective (specify the crop)
Herbicides		
Insecticides		
Fungicides		

- what category and which specific products do you sell the most of ?

Tableau 2

Category	Most popular products (top 5)	
	Non Selective	Selective
Herbicides		
Insecticides		
Fongicides		

- who are your principal clients?
- what role do you play in the supply chain?
 - Importer, wholesaler, retailer, producer
- do you represent one or more suppliers?
- who is your principal supplier?

- who are your principal competitors?
- how many sellers do you compete with?

2. Market structure and evolution

- have quantities sold in your market increased or decreased since you began selling pesticides?
 - Herbicides
 - Insecticides
 - Fungicides
- have the number of importers increased or decreased over time
- have the number of brands increased or decreased over time
- have the number of sellers increased or decreased over time
- on what basis do you compete with other suppliers and brands?
 - Quality? Price? Volume? Service? Credit terms? Packaging?, Advertising?

3. Pesticide policy

- can anyone sell pesticides? what is required?
- have you proposed any specific products for homologation (registration)?
- how long does the homologation (registration) process take?
- what import procedures are required?
- what role do generic herbicides, insecticide play in local markets?
- have you experienced any problem with counterfeiting of herbicides, insecticides?
 - Adulteration? Have you found adulterated pesticides being sold? What did you do about it?
- Which generics or counterfeit products compete directly with your principal products?
- Have your costumers ever complained about your products?
- Enforcement capacity?
- How well are pesticides regulated?
- Do you see any major problems in the pesticide market?
- Any recommendations on ways to improve functioning of local pesticide market?

Table 3 For Importers/retailers

Market summary	Major competitor product	Key concerns
Glyphosate		
Other herbicides		
Insecticides		
Fungicides		

e. Policy Makers and Regulators Interview guide

1. Regulatory overview

- list of legally allowed pesticides
- Licensing requirements for pesticides sellers
- national regulators
 - pre-homologation
 - homologation
 - post-homologation

2. National regulations in practice

- import procedures and requirements for pesticides?
- pre-homologation authorization for testing ?
- homologation decisions
- post-registration decisions
- post-registration monitoring
 - any studies of environmental impact?
 - of impact on human health?
 - Of product quality?
 - Of unregistered pesticides being sold?
- regulatory enforcement ?
- what actions have been taken in past year to control adulterated, outdated or non-homologated pesticides ?
- enforcement capacity : responsible agency; # agents
- testing capacity: labs, names, staffing, capabilities

3. What key regional policy decisions affect pesticide sales here?

- awareness of regional pesticide policies affecting national regulators
- local recognition of regional homologation and testing?
- implementation status of key regional policy decisions
 - implementing laws and regulations
 - CNGP established?
 - CNGP functioning? What regularity? effectiveness

4. Market observations

- quantity trends
- role of generics
- counterfeiting?
- adulteration?
- quality of products sold
- share of unregistered products
 - Herbicides
 - Insecticides

5. Problems and opportunities

- What major opportunities do you see in the pesticide market?
- Do you see any obvious problems in the pesticide market?
- Any recommendations on ways to improve functioning of local pesticide market?

Appendix 4. Trends in the quantity of pesticides imported in the country (tonnes) from 2004-2015

Pesticide Category	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Insecticide	610	5,982	6,921	9,979	8,391	9,478	11,803	837,610	547,210	7,679	14,161	21,741
Fungicide	770	1,713	2,148	2,575	6,037	2,198	5,653	648,000	366,000	5,236	1,648	1,548
Herbicide	1096	5,340	8,780	8,932	11,445	13,535	13,162	884,700	1,005,900	41,593	35,630	316,218

Source: EPA, PPRSD/MOFA, 2015

Appendix 5. Price trends

Appendix 5a. Average Import prices of pesticides into Ghana ('000 Ghs/litre)

Pesticides category	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Herbicide	7.12	7.12	7.75	8.0	8.10	7.75	8.75	9.20	12.10	12.87
Insecticide	7.37	8.00	8.25	9.75	9.75	10.25	10.62	10.62	15.12	17.62
Fungicide	9.50	12.87	14.37	14.12	15.62	20.12	19.75	21.25	26.25	21.75

Source: trader interviews conducted in August 2016.

Appendix 5b. Average Domestic market prices of pesticides in Ghana (Ghs/litre)

Pesticides category	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Herbicide	15.75	6.50	7.25	8.75	8.00	8.87	9.12	9.50	12.12	21.60
Insecticide	8.12	9.62	10.62	14.28	11.75	12.75	14.50	14.50	16.50	19.12
Fungicide	13.50	18.75	20.50	21.50	21.25	19.50	21.00	21.50	21.87	24.50

Source: Trader interviews conducted in August 2016.

Appendix 6: Inventory of registered and unregistered glyphosate products sold in local markets in 2016

No.	Product Name	WHO Classification	Firm Registering Pesticide	Local Distributor (s)	Active Ingredient (s)	EPA Registration Number	Uses
Registered glyphosate products							
1.	Adom 48SL	III	Jakess Agro Company Ltd, Kumasi	Jakess Agro Company Ltd, Kumasi	Glyphosate (410g/l)	FRE/1467/00791G November 2014	Herbicide for the control of grasses and broadleaf weeds in cereals and vegetables
2.	Adwuma Wura 480SL	III	Kumark Company Limited, Kumasi	Kumark Company Limited, Kumasi	Glyphosate (480g/l)	FRE/1543/00863G August 2015	Herbicide for the control of annual, perennial grasses and broadleaf weeds in cereals and vegetables
3.	Adwuma Wura 5.7 WSG	III	Kumark Company Limited, Kumasi	Kumark Company Limited, Kumasi	Glyphosate (75.7%)	FRE/1543/00864G August 2015	Herbicide for the control of annual, perennial grasses and broadleaf weeds in cereals and vegetables
