Lantana Bandolista™ Pineapple

*Trial Plant*

**Company Name:** Syngenta  

**General Description:** An annual that looks like a miniature bush with vibrant yellow to pale yellow flowers that form in small bunches. They have dark green leaves and smell like a tomato plant.  

**Comments:** Well growing plant that filled in its square. Beautiful flowers pop against darker foliage. They do great in the ground and could potentially do great in a container. They also seem to be great pollinator (Bees, butterflies) attractors.
