

Field horsetail

Equisetum arvense L.

Life cycle

Perennial, spore-producing plant.

Leaves

Not present.

Stems

Vegetative stems are green and branch in whorls. Stems may have a bottle-brush appearance and should not exceed 2 feet in height. Stems die back to the ground in winter.

Flowers and fruit

Erect, unbranched, white to brown fruiting stalks (stems) bear terminal spore-releasing cones. Flowers are not produced.

Reproduction

Spores and prolific rhizomes.

Patch of field horsetail fruiting and vegetative stems.

Field horsetail *continued*

Field horsetail fruiting stalk.
