

## Perennial sowthistle

*Sonchus arvensis* L.

### Life cycle

Erect, patch-forming perennial.

### Leaves

Seedling leaves initially develop from a basal rosette from a deep taproot.

Lower leaves are alternate, blue-green, 4 to 12 inches long with two to five lobes with prickly teeth on each side,

gradually becoming smaller towards the top with a clasping base. Leaves have a thickened midvein and exude a milky sap when damaged. Leaf midvein is not prickly underneath.

Perennial sowthistle plant.

Milky sap of perennial sowthistle.

Perennial sowthistle flower.

**Asteraceae (Aster family)**

## Perennial sowthistle *continued*

### Stems

Erect, herbaceous stem up to 5 feet tall that branches only near the flowers. Stems are hollow and smooth with ridges and exude a milky sap when damaged. Upper stems may have gland-tipped hairs.

Clasping leaf base of perennial sowthistle.

### Flowers and fruit

Bright yellow ray flowers are 1 to 2 inches wide and found in clustered heads. The seed is enclosed in a single-seeded, narrow, oval, reddish brown, ribbed, wind-disseminated fruit.

### Reproduction

Seeds and extensive creeping roots.

Lower leaf of perennial sowthistle.

### Similar weeds

#### **Annual sowthistle** (*S. oleraceus* L.)

Differs by having an annual life cycle and short taproot, less prickly leaf margins, and pale yellow, 0.5- to 1-inch-wide flower heads. Leaf midvein is not prickly underneath.

#### **Prickly lettuce** (*Lactuca serriola* L.)

Differs by having an annual or biennial life cycle; fine prickles on leaf margins and sharp prickles on the underside of the leaf midvein; and a many branched, spreading panicle with numerous, pale yellow flower heads less than 0.5 inch wide.

#### **Spiny sowthistle** [*S. asper* (L.) Hill]

Differs by having an annual life cycle and short taproot, leaf margins with many sharp prickles, earlike lobes where the leaf attaches to the stem, and flower heads 0.5 to 1 inch wide. Leaf midvein is not prickly underneath.

Spiny sowthistle leaf.

Sharp prickles on the underside of the leaf midvein of prickly lettuce.
