Large crabgrass

Digitaria sanguinalis (L.) Scop.

Life cycle

Prostrate to ascending summer annual.

Leaves

Both leaf surfaces and sheath are densely hairy. Leaves are rolled in the bud and more numerous at the base. Leaves are generally shorter, wider and more tapered than those of most other grasses.

Ligule

Jagged, membranous ligule.

Large crabgrass seedling.

Stems

Prostrate to ascending stems may reach 3 feet tall, capable of rooting at the nodes. Mature stems are often compressed in crosssection.

Flowers and fruit

The seedhead is a terminal panicle that consists of a few to several
