                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 1 0 1<br>1 0 1            

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101<br>101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 202                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ° 101                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                             | #### FUEL COST SIMULATION MODEL

#### Abstract

The Whitfield A. Russell & Associates' fuel cost simulation model (FCSM) calculates hourly fuel costs by unit over a specified time frame. The model is written in FORTRAN and is composed of a main routine and 23 (twenty-three) subroutines. The model incorporates structural and economic parameters to derive a least-cost mix of generating units during a weekly planning horizon. The current version simulates operation of a power system composed of up to seventy generating units and reports monthly tables documenting unit and system; generation, fuel costs, and running rates.

I. Electric Utilities And Electric Utilities Systems Fundamentals Employed In WARA Fuel Cost Simulation Model.

In most cases the load pattern of a typical electric utility can be served optimally with various types of generating units. The consideration of generation by system load pattern follows from an analysis of the annual peak load, annual energy and use pattern. Each electric utility has a daily, weekly, seasonal and annual load variation pattern which can be served optimally with an appropriate "mix" of generating usage types. Figure No. 1, entitled "Annual Load Duration Curve Demonstrating Use of Generation Types" illustrates this point. On this Figure is plotted a curve of the hourly demands on a typical electric utility in descending order of magnitude from the highest annual value to the lowest. Such a curve may be plotted using either megawatts (MW) or percent of annual peak megawatts as the ordinate and either total annual hours or percent of annual hours as the abscissa. This curve is known as the "annual load duration curve." Similar curves can be constructed for any time period and are an important tool for system planning analyses.

Also shown on Figure No. 1 are portions of the load served by three types of generating units commonly used by utilities. The so-called base load unit operates a large percentage of the time during the year; the cycling generating units, being less economical, only operate to produce additional capacity and energy as needed after the base load units are operating to full capacity. Finally, the peaking units operate a small percentage of the time. Although the cost of energy from a thermal peaking unit is higher than the energy costs associated with cycling and base load generation, the peaking unit does not add much to the total annual production cost of a system when used in the peaking mode because it operates relatively few hours. The daily operation of these types of units can be demonstrated by reference to a typical daily load curve of a summer peaking electric utility, Figure No. 2. On this curve is indicated the kinds of generation mentioned previously, the base load, the cycling, and the peaking type generation. This curve, also shows higher cost semi-peaking units and fuels used for each classification of generation.

Furthermore, other than the hours of service for which a generating unit is designed, and which tend to identify it as base load, cycling or peaking are its (i) production costs and (ii) capital costs. The base load plant requires the highest per unit capital investment, but is lowest in overall production cost. This type of generating unit is designed to operate continuously except when taken off the line for maintenance or when forced off the line during emergencies. Cycling generating units have somewhat higher production costs and require somewhat lower per unit investment. Older generating units which previously provided base load power often serve this function. Because of their design, (or because they are old units which are more flexible or dispensable), cycling units are often better able to follow changing loads than large base load generating units, and may be placed in and out of service on short notice. The peaking unit has the lowest per unit investment cost, but its production cost is considerably higher than that of other types on a unit cost basis. Peakers are the most flexible operationally and can be started in a matter of minutes instead of hours required by cycling and base load units. Table 1 demonstrates an approximate ranking of the three types of capacity.

#### TABLE 1

## COMPARISON OF: BASE, CYCLING AND PEAKING TYPES OF GENERATING CAPACITY

		Relative	Typical
Туре	Relative	Operating	Annual Hours
estantisticturation and an and a second and a	Cost/KW	Expense/KWH	Operation
<i>,</i>	ç	8	
Base	100	10	6000-7000
Intermediate	60	20	3000-4000
Peaking	30	100	To 2000

The annual operating hours of the base load plant are high compared to those associated with peaking units which are placed on and off the line on a daily and seasonal basis and operate generally less than one fourth of the time. These comparisons illustrate that excessive outages of base load generating units will increase production costs as base energy is replaced by purchased, intermediate or peaking energy.

Electric utilities/generation capacity is generally utilized on an annual cycle as shown on Figure No. 3. This figure demonstrates the typical annual utilization cycle of generating capacity for a summer peaking electric utility including maintenance and reserves. The items represented on this Figure are: first, the monthly peak load which must be met with generation; second, moving up on the curve, the operating reserve which is being provided for system regulation and reliability, and third, scheduled maintenance periods for the operating units. Note that at the time of system annual peak demand, the represented utility does not schedule any generating maintenance, an unsurprising result.

The top of the curve represents the total installed generating capacity. This capacity is comprised of numerous generating units with different dependable capacity ratings, which ratings are dictated by ambient and cooling water temperatures. The nominal generating rating is usually reduced during the hottest period of the year. During winter months, a higher rating of dependable capacity is assigned because of lower exhaust pressure on the system turbines resulting from lower ambient and cooling water temperatures.

In addition to the benefits obtained by optimizing the use of generating units, coordination and pooling enable utilities to lower reserve margins, install less expensive capacity and operate more efficiently. These other benefits are attributable to the synergism which results from coordination.

V-162

Fewer coordinated resources need be utilized to render service at an equal or improved level of reliability and cost compared to the cost and reliability achievable with isolated resources.

18

The level of reliability is also enhanced by coordination or pooling of resources because more potential sources of supply are made available to serve loads and thereby decrease the probability that simultaneous outages of generating equipment will occur in amounts sufficiently large to cause interruptions of service. Of course, the capacity of transmission linking members of a pool or coordinated group can limit the support obtainable from a pool. This limit can be lifted by pooling as a result of another important aspect of coordination, the economy of scale associated with transmission.

Transmission of power, both within and between large systems, can be accomplished in large MW blocks over long distance with Extra High Voltage ("EHV") transmission at very low per unit prices and losses. When systems coordinate, they enhance the opportunity for achieving economies of scale in transmission as well as generation.

Also, substantial operating savings can be achieved by a coordinated group of utilities in the commitment and dispatching (loading) of generating units. As utilities interconnect and coordinate their operations, the largest contingency which must be continuously guarded against and withstood by the coordinated group is of the same magnitude in megawatts as the largest contingency of the groups in isolation. The operating reserve requirements of a coordinated group are smaller as a percent of daily peak load or installed capacity than such

requirements would be for each of the members of the group if operated in isolation.

The commitment of generating units, referred to above, means the process of starting up and synchronizing generators. For generators driven by steam turbines, this can be a lengthy and expensive process. For hydroelectric and internal combustion turbines, the commitment process consumes considerably less expense and time.

Most steam units (specially-designed cycling units excluded) cannot be started up and shut down in the course of a day's operation without creating substantial thermal stress on unit components. Therefore, steam units committed for service beginning on a Monday are usually operated for at least the ensuing period of 5 week days. Of course, departures from this general rule are made when conditions and economics so dictate. From day to day, based upon the forecast of the following day's load pattern, peak demand, units available, partial and forced outages, and interchange schedules, revisions are made in the daily commitment of generating units. For example, if a weather front is expected to pass through the service territory and/or partial or complete forced outages occur on previously committed units, then an additional resource will be required. Depending upon economics, this may require a control area to arrange an import of capacity from some other control area or else commit (start-up and synchronize) a generating unit less efficient than that originally planned.

By coordinating their unit commitments, utilities in a coordinated group can often reduce the number of steam units which must be started and thereby assure

that the units which are started are more heavily and efficiently loaded.

Usually, the amount of steam capacity committed is an amount approximately equal to the base load and cycling portions of the forecast week's load plus an increment sufficient to provide any otherwise unserved operating reserve. The operating reserve requirement is usually 6% to 7% of the forecast daily peak and is furnished partially from quickstart hydro and combustion turbine units.

The economic dispatch of generating units, referred to above, is the process by which an operator (or computer) determines how to allocate most economically increments or decrements of loads between the available and operating generating units. This is an important matter to an electric utility (or pool of such utilities) because the demand on its total plant is constantly changing, and, in large systems, there are large numbers of generating units to be controlled. Hence, selection of the proper loading combination can achieve substantial savings over the production costs incurred by operating suboptimal combinations of generating units.

The system which performs this dispatch function is based upon a well-known principle of economics generally, and utililty economics in particular, which holds (with exceptions not significant at this point) that the available production sources will serve the load at the lowest total cost when each such unit or production source not fully loaded is operating at the identical incremental cost. A substantial benefit of fully integrated operations is that a centrally dispatched pool can and does

eliminate, on a minute-to-minute basis, the discrepancies between incremental operating costs of generating units. In the absence of central dispatching, such discrepancies could well exist and result in a substantial waste of resources.

Interconnected electric utilities are customarily subdivided into control areas along corporate or ownership boundaries principally for historical reasons. From a technical standpoint, the boundaries are largely arbitrary, with the result that the number of control areas in nearly every region of the country could be reduced sharply, and the geographic and electrical coverage of the remaining control areas increased, with salutary results. A formal power pool can consolidate control areas in order to achieve optimal savings.

In the course of an operating day, once the appropriate resources have been committed in a given control area, the generating units under an optimal dispatching scheme automatically serve incremental load on a second-to-second basis from the unit which has the lowest incremental cost. The load and increments thereof which must be served by a given control area are determined by obtaining the algebraic sum of power flowing into and out of the area through all its interconnections with adjoining control areas. If, in addition, an export is planned, additional generation in the amount of the export plus associated losses would be scheduled for the control area. The information on power flows to and from a control area is brought to a central processer where the scheduled amount of exports and imports is compared to the measured exports or imports. This comparison usually occurs every few seconds. If there is an excess of area generation

over that required by the schedule, then a signal is sent to the appropriate generators to lower output. If, in contrast, the schedule shows an insufficient amount of power being exported (or too much power being imported), then a signal goes to the generating units to raise generation. From data stored in the central processor, a signal to raise generation would go that unit under control which is then generating at the highest incremental cost. As described earlier, after each adjustment, the incremental cost from each unit that can serve more load should be the same. A comprehensive description of this topic would take account of tie-line bias, voltage regulation, "must-run" generating units and a plethora of other factors which compete for the attention of electric utility operators.

ţ

Not all units are necessarily under the control of an economic dispatch system. For example, the controls are deemed impractical for use on combustion turbines in many cases because the units are too small to justify the expense and the fluctuation in output resulting from responses to controls would degrade efficiency. Moreover, some base load generating units always have the lowest incremental cost in a control area and need not be controlled. Therefore, controls are sometimes not applied to such units.

#### II. Model Overview

The WARA FCSM is a FORTRAN program composed of a main routine and twenty-three subroutines. The model flow diagram is shown in Figure No. 5.

The main program reads in all of the data, properly aligns data for the particular month to be analyzed, and then calls the various subroutines to determine unit commitment, unit generation, and unit cost. The order of execution is consistent with the objective of meeting a given load with the least cost configuration of units over time. The hydro units are dispatched first, and the pumped storage and natural storage units are used as peak load shavers whenever possible. The base load units are then temporarily assumed to run at full load. The "load" available to cycling units is then calculated as the original load less hydro generation plus reserve requirements less base load generation. The cycling units are then committed in ascending economic dispatch order until load is met or capacity is reached.

At this point, the model determines the loading of each unit which is available and committed in accordance with a load division table to minimize cost. These estimates are adjusted to insure that committed cycling and base units are generating at a minimum or greater loads. If excess generation results, the program backs down units in descending economic dispatch order. Combustion turbine peaking units are assumed to be run at maximum generation only, and any excess generation resulting from their use must be deducted from the cycling units.

When interchange transactions are to be modeled, the program then compares the modeled utility's running rate to the selling utility's running rate. If the difference is greater than two mills then the model allows interchange transactions to occur. If the incremental cost is above the selling

utility's running rate, then the modeled Utility's units are backed down (but not below minimum) until the running rates are equalized. If the modeled utility's incremental cost is below the selling utility's running rate, then the modeled utility's units are loaded until all capacity is utilized or the running rates are within a specified differential per kWh. The model computes the cost of generation, sales price, and split savings at each block in the production function and sums these figures for each hour.

Ļ

The program flags hours where load cannot be met or where over generation occurs from existing unit commitments to enable the analyst to assess the results.

The incremental heat rate curve of each unit is given by the equation  $y^1 = b+2cx+$  which is the first derivative of the input-output curve  $y=a+bx+cx^2$  with respect to x, the loading on the unit. The coefficients a, b and c are fixed and are particular to a specific unit, x is the unit loading, y is total fuel consumption and  $y^1$  is incremental fuel consumption.

It is necessary to use an equation because both the total heat rate and incremental heat rate vary with the loading on a generating unit.

This last equation,  $y^{l} = b+2cx$  and a fuel cost factor (FC) are used to arrive at the incremental cost of energy for each unit. That is,

Incremental cost = [b+2cx] FC

FC is the fuel cost, and, as noted above b and c are coefficients from the original input-output equation. X is again the loading on the unit.

The program compiles a tabulation of the megawatts available from each unit, adjusted for outages at each incremental cost of interest. For each level of incremental cost, the sum of megawatts available from all committed units is obtained. This sum, together with the arrays associated with each generation unit, constitute what is referred to as the "system load division table". (Figure No. 5 to 6). Although the arrays for each unit change only for changes in fuel cost or outages, the array of total system megawatts and incremental cost is affected by unit commitments, especially base load unit commitments.

For a given set of committed units and given system load requirement, the model determines the expected level of system incremental cost and the optimal loading on each unit. (See Figure No. 5 to 6). Commitment of the proper combination of units is done by a separate subroutine. The loading point for each unit enables the program to compute cost for each unit and for the entire system. Both the megawatt loadings and costs for each unit and the system are accumulated for the periods of interest enabling the analyst to determine expected production and fuel cost for each unit in each time period.

The following is a brief description of each model component.

- Main Routine Reads the case parameters and data files for unit parameters, outages, loads, diversity interactions, and running rates. Controls the flow of data thoughout the program.
- FILPTS Sets index values for days to be analyzed.
- FILL Loads the outage data for each unit.
   DTOD Calculates the number of days between two dates.

e %	DDAY -	Calculates the day of the week for each
		date.
0	INITIAL -	Initializes all arrays.
6	HEADER -	Prints the report title page.
8	TABRPT -	Prints the monthly load division table
		(optional).
8	RESERV -	Controls the calculation of reserves.
e	TYPE1 -	Calculates reserves as a percent of
		hourly load.
G	TYPE2 -	Calculates reserves a a percent of daily
		peak.
0	TYPE3 -	Calcualtes reserves as a percent of
		largest (or specified) unit.
	BASU -	Calculates the energy availabe from base
		units.
ø	HEAP -	Sorts data in descending order.
9	HYDRO1 -	Calculates dispatch of run of river
		hydro units.
8	HYDRO2 -	Calculates dispatch of natural storage
		hydro units.
ø	HYDRO 3 -	Calculates dispatch of pump storage hydro
		units.
ø	ECDISP -	Produces monthly load division tables.
8	CRONID -	Calculates load and total cost given a
		running rate (incremental cost) or calcu-
		lates a running rate and total cost given
		a load.
8	CYMAIN -	Controls the commitment of cycling units.
0	COMMIT -	Calculates the commitment of cycling
		unit.
9	EEVAL -	Calculates the comparative economics of
		cyclers and peakers.
0	RECON -	Calculates unit loadings consistent with
		commitment schedule for all non-hydro
		units. Calculates sales/purchases to
		other utilities (pool).
¢	RPTWTR -	Produces final reports.

ł

#### IIF. Data Requirements

To execute the WARA FCSM the following data is required:

- A. System level
  - 1) Hourly loads
  - 2) Diversity-In (Optional)
  - 3) Diversity-Out (Optional)
  - 4) Reserve Requirements
  - 5) Pool running rate (Optional)

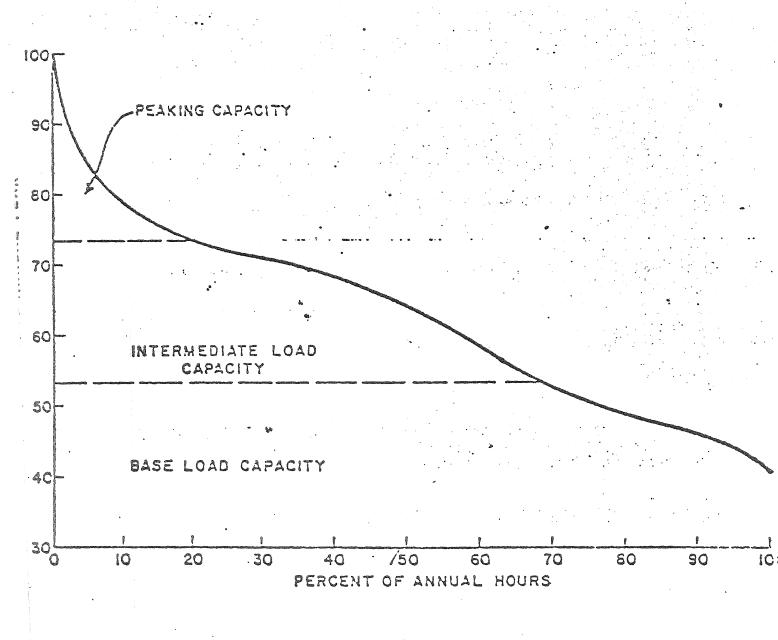

### B. Unit level

- 1) All units
  - a) name
  - b) fuel type
  - c) generation type
  - d) economic dispatch order number
  - e) minimum load
  - f) maximum load (summer/winter)
  - g) fuel cost
  - h) outages
  - i) heat rate coefficients
  - j) start up costs
  - k) minimum down time
  - 1) minimum up time
- 2) Hydro units
  - a) monthly estimated energy
  - b) minimum release schedule (Optional)
  - c) pumping efficiency *
  - d) maximum effective storage *

* required only is unit is pump storage hydro

# ANNUAL LOAD DURATION CURVE DEMONSTRATING USE OF GENERATION TYPES

- TO: D.N. Jones, Director National Regulatory Research Institute
- FROM: S.A. Sebo, Professor Electrical Engineering
- DATE: April 3, 1981
- SUBJ.: Review of "A ROLE FOR THE COLORADO PUBLIC UTILITIES COMMISSION IN POWER POOLING"
- 1. The purpose of the draft report written by Whitfield A. Russell & Associates (Washington, DC) is to review some aspects of the power pooling efforts by utilities serving Colorado and adjoining states. Initial efforts called for the formation of the so-called Cactus Pool. Negotiations were terminated without success in 1980. The study states that the present regional power pool (Inland Power Pool, IPP) remains behind several other pools in achiev-ing essential pooling objectives. Section I.B. analyzes the reasons for the termination of the Cactus Pool negotiations. These reasons were related to reserve criteria, and the scope of pool coordination and pool planning.
- Power pooling of electric utility companies means the interconnection and coordination of the power systems (including their generation, transmission and distribution facilities) owned by the individual utility companies in order to obtain better technical performance and economic benefits. Specific advantages are:
  - elimination of the necessity of each system standing on its own
  - coordination of system operation
  - better utilization of facilities and resources
  - reduction of normal spinning and cold reserves
  - utilization of generation and load diversity and time-zone differences
  - energy supply from the lowest-cost source
  - maintenance coordination
  - modification of construction plants
  - utilization of larger unit sizes
  - better economy of the entire coordinated system
  - better utilization of personnel
  - better reliability of power supply

- 3. The study summarizes several aspects of power pooling in general, and power pooling of certain groups of electric utilities in particular (Section I.D.). One aspect of power pooling is the role of the regulatory agencies; another one is the impact of power pooling upon regulation. More important contributing factors to determine the latter are:
  - availability of joint ventures to construct large base-load generating units
  - the degree of centralized economic dispatch and operation
  - pricing since it is more predictable than in case of a less structured organization
- 4. Intrinsic pooling issues are reviewed in Section II of the study. The study lists the following items:
  - pattern of demand (load) variation
  - optimal mix of generating unit types
  - installed reserve in terms of generation and transmission capacity (this is the redundant production and transmission capacity)
  - operating (spinning) reserve in terms of generation capacity (this is the unloaded but available generating capacity, usually equal to 5-7% of the estimated daily peak demand, or the peak capacity rating of the largest unit within the power pool)
  - economy-of-scale units, a rule of thumb is presented:

 $\frac{\text{capital cost of large unit}}{\text{capital cost of small unit}} = \left(\frac{\text{capacity of large unit}}{\text{capacity of small unit}}\right)^{0.8}$ 

- unit commitment (the process of starting up and synchronizing generating units) coordination
- economic dispatch of loads between the available and operating generating units, especially if a central dispatching facility is available for the entire (combined) control area
- the number of control areas can be reduced sharply
- 5. Section III summarizes arrangements of the New England Power Pool (NEPOOL), the Pennsylvania-New Jersey-Maryland (PJM) Interconnection, the Florida Electric Power Coordinating Group (FCG) and the Mid-Continent Area Power Pool (MAPP). The following aspects are summarized:
  - number of participating companies, agencies and cooperatives
