

Types of Web Projects

This document is intended to help clients make informed decisions about their web projects. Please take the time to read over the various technologies we support, as well as others available at MSU.

ANR Technology Services

Web Hosting

We offer server space at a low fee to ANR units who need to host an existing PHP, ASP, or ColdFusion website. This is a good solution for self-managed sites which do not require additional support.

contact webadmin@anr.msu.edu

Group Projects / Password-Protected Pages

We use SharePoint to provide an internal environment for groups within ANR to collaborate on document editing, post meeting notes, and communicate in a shared, private forum.

contact ANRTS-STAT@anr.msu.edu

Event Registration

Our Event Registration System allows individuals and units to quickly create a web-based solution that can collect registrations, provide credit card processing, and produce reports for your event.

contact events@anr.msu.edu

Existing Websites

Some projects can fit into existing websites, saving time and money while still providing editor access. This may be a good solution for projects, topics, or events related to a larger unit within ANR.

contact anrcommunications@anr.msu.edu

Custom Websites

We build custom websites in our content management system, which allows nontechnical website administrators to easily manage complex content. This is a good solution for larger web projects.

contact webadmin@anr.msu.edu

Enterprise Applications

Our programmers can help you to establish a plan of work to create custom web applications to meet virtually any need. This is a more expensive, long-term option but it can yield impressive results!

Other MSU Services

Host Files

If you need a way to put a file on the Internet for retrieval or to transfer a larger file within MSU, the FileDepot service provides a way to do this quickly and easily.

Streaming Videos

Kaltura MediaSpace is MSU's alternative to YouTube for streaming media. This solution will allow you to record a screen capture, host video files, and share hosted media with others.

visit <https://mediaspace.msu.edu>

Other Media

The LearnDAT group also provides StoreMedia, a solution that will allow you to host podcasts, Camtasia and Breeze recordings, RSS feeds, and other multimedia content.

visit <https://storemedia.vudat.msu.edu>

Webinars

MSU offers both Adobe Connect and Zoom for webinars and video conferencing. If you need to present to a remote audience or host an online meeting, these may be good solutions for you.

visit <http://connect.msu.edu> or <http://msu.zoom.us>

Web Hosting

MSU offers web server space in their virtual hosting environment. This is a good solution for units who are not affiliated with ANR or who intend to maintain their own website long-term.

visit <http://tech.msu.edu/web-hosting>

Custom Websites

MSU offers several options for building new sites in their content management system. This is a good solution for websites with content that is not related to any larger unit within ANR.
