Overview

The Whole Farm Business Analysis is the first financial report and includes all participating farms. This is a gauge of the financial performance of the average Michigan farm completing the Finpack FinAn business analysis through MSU-Extension. Also included, are two subsets of the Whole Farm Analyses – Crop Farms and Dairy Farms. Farms are included as "dairy" or "crop" if over 70% of their gross farm income comes from their milk sales/dairy cattle sales or crop sales, respectively.

Highlights

Interpretations

The average 2020 farm financial results were better than in the last four years in all major categories. Average 2020 net farm income at \$195,109 was up almost \$75,000 over 2019. There were large positive impacts from COVID aid related programs and other government programs with the financial returns to Michigan farms. The impact was so significant that if the COVID and government program monies were removed and all else remained the same, the net farm income would become negative. An extraordinary year by all measures.

Dairy Farms

Dairy farms had been going through some very difficult financial times, as covered in the news media and other outlets. Due to the large COVID and government program payments, as well as a relatively stable milk price, dairy farms had the largest net farm income in over four years. Average dairy net farm income was \$315,943 and an increase in FMV net worth of \$290,274 over 2019. We anticipate, many of our Michigan dairy farms were able catch up financially from the previous, very challenging years.

Crop Farms

The average net farm income was \$180,465, which was also the highest in over four years. This result was from good yields and improved year-end prices for most of the major crops. Crop farms did benefit from the COVID and government program payments, especially with the program crops corn, soybeans, and wheat. FMV net worth increased by \$192,335 over 2019.

Enterprise Analysis

Enterprise Analysis calculates the cost of production and then is adjusted by government payments received and unpaid operator labor. Crop enterprises include corn, corn silage, soybeans, and winter wheat. Crop enterprise reports are sorted by owned and cash rent as well as by net return. For some crops, there were not enough farms for the enterprise report. The hay, alfalfa enterprise report by tenure combined the farms to provide enough information to generate a report.

Dairy is the only livestock enterprise with enough farms to produce an enterprise report. The cost of milk production is calculated on both a per cow basis and on a per hundredweight of milk basis.

Compiled by: John Jones, TelFarm Program Co-Director and Stephanie Lelo, TelFarm Center Support Specialist, AFRE Dept, MSU. MSU-Extension Farm Management Educators Roger Betz, Corey Clark, Florencia Colella, Jon LaPorte and Stan Moore contributed FINPACK Farm Business Analyses for this report.
