## How Time Affects The Value of Money

Investor A invests $\$ 2,000$ a year for 10 years, beginning at age 25 . Investor B waits 10 years, then invests $\$ 2,000$ a year for 31 years. Compare the total contributions and the total value at retirement of the two investments. This example assumes a 9 percent fixed rate of return, compounded monthly. All interest is left in the account to allow interest to be earned on interest.
