

Smart tree selections

for communities and landowners

Norway Maple

Acer platanoides

Height: 40' - 50'

Spread: 30' - 50'

Site characteristics: Well-drained soil; full sun to partial shade

Zone: 3 - 7

Wet/dry: Tolerant of a wide range of soil moisture; drought and heat tolerant

Native range: Eastern and Central Europe; Southwest Asia

pH: 4.0 - 7.0

Shape: Oval to upright-oval or rounded to broadly oval

Foliage: Dark green to maroon-colored leaves, depending on cultivar; dense; yellow fall color

Other: Abundant winged-fruit (samaras)

Additional: Generally tolerant of many urban pollutants; some observed salt tolerance; popular green-leaved cultivars include Debroah, Emerald Queen, Superform; cultivars with maroon foliage include Crimson King, Faasen's Black, Royal Red, Schwedleri

Pests: Susceptible to Verticillium wilt and issues with tar/black spot

Responsible use: Norway maple's adaptive and reliable performance has led to widespread use. Seeds are dispersed by wind and are a problem when trees are planted in close proximity to natural areas (10-100 m). Understanding this behavior allows it to be used responsibly by not planting it in close proximity to natural areas (100 m). Through cultivar selection and responsible placement, Norway maple can continue to serve urban and suburban landscapes without negative impacts on natural areas.

Smart tree selections for communities and landowners

Bert Cregg and Robert Schutzki, Michigan State University, Departments of Horticulture and Forestry

A smart urban or community landscape has a diverse combination of trees. The devastation caused by exotic pests such as Dutch elm disease, chestnut blight and emerald ash borer has taught us the importance of species diversity in our landscapes. Exotic invasive pests can devastate existing trees because many of these species may not have evolved resistance mechanisms in their native environments. In the recent case of emerald ash borer, white ash and green ash were not resistant to the pest and some communities in Michigan lost up to 20 percent of their tree cover. To promote diverse use of trees by homeowners, landscapers and urban foresters, Michigan State University Extension offers a series of tip sheets for smart urban and community tree selection.

In these tip sheets, we suggest trees that should be considered in situations where an ash tree may have been planted in the past. We have limited the tip sheets to medium to large trees that fulfill similar design intent as ashes. We include information on general characteristics, hardiness, mature form, size and other noteworthy qualities. For species native to eastern North America, we provide a map of the species' native range. We tried to present a representative number of "tried and true" trees and some lesser-known or underused selections suitable for Michigan. Smart tree selection is guided by Right Plant/Right Place and Responsible Use: selecting trees based on a tree's functional use, aesthetics, adaptability and environmental contributions to the immediate site and surrounding areas. Our tip sheets focus on the species level, although we do mention cultivars of several species. The following trees are recommended and featured in a tip sheet:

- American hornbeam, *Carpinus caroliniana*
- American hophornbeam, *Ostrya virginiana*
- Amur corktree, *Phellodendron amurense*
- Amur maackia, *Maackia amurensis*
- Baldcypress, *Taxodium distichum*
- Basswood, *Tilia americana*
- Bur oak, *Quercus macrocarpa*
- Callery pear*, *Pyrus calleryana*
- Chinkapin oak, *Quercus muehlenbergii*
- Dawn redwood, *Metasequoia glyptostroboides*
- Elm hybrids, *Ulmus spp.*
- European hornbeam, *Carpinus betulus*
- Freeman maple, *Acer ×freemanii*
- Ginkgo, *Ginkgo biloba*
- Hackberry, *Celtis occidentalis*
- Hardy rubber tree, *Eucommia ulmoides*
- Hedge maple, *Acer campestre*
- Honeylocust, *Gleditsia triacanthos*
- Japanese pagodatree, *Sophora japonica*
- Katsura tree, *Cercidiphyllum japonicum*
- Kentucky coffeetree, *Gymnocladus dioicus*
- Little-leaf linden, *Tilia cordata*
- London planetree, *Platanus ×acerifolia*
- Miyabe maple, *Acer miyabei*
- Northern pin oak, *Quercus ellipsoidalis*
- Norway maple*, *Acer platanoides*
- Red maple, *Acer rubrum*
- Sawtooth oak*, *Quercus acutissima*
- Scarlet oak, *Quercus coccinea*
- Shantung maple, *Acer truncatum*
- Shingle oak, *Quercus imbricaria*
- Shumard oak, *Quercus shumardii*
- Silver linden, *Tilia tomentosa*
- Swamp white oak, *Quercus bicolor*
- Sweetgum, *Liquidambar styraciflua*
- Sycamore maple, *Acer pseudoplatanus*
- Trident maple, *Acer buergerianum*
- Tulip tree, *Liriodendron tulipifera*
- Tupelo, *Nyssa sylvatica*
- Turkish hazel, *Corylus colurna*
- Yellowwood, *Cladrastis kentukea*

*See on tip sheet regarding responsible use of this species.
