LAWNCARE TIP SHEET

MOW HIGH - RECYCLE CLIPPINGS

- Mow at least 3" high
- Return clippings to recycle nutrients
- Sweep or blow clippings from walks and driveways onto the lawn
- Taller grass crowds out weeds and promotes deeper roots
- Deeper roots help the lawn survive droughts

FERTILIZE IN FALL FOR BEST RESULTS

- Fall is the best time to fertilize your lawn
- Be patient in the spring - wait until May to fertilize
- Don't fertilize if the ground is frozen or saturated with water
- Don't guess, soil test for proper fertilizer recommendations

CHOOSE LAWN-TYPE FERTILIZERS

- Choose lawn fertilizers with low or no phosphorus (the middle number) and follow the directions
- Avoid using "triple" products (e.g. 12-12-12)
- Confirm spreader setting before applying

CLEAN UP - AVOID SURFACE WATER

- Maintain a **NO APPLICATION** zone near lakes, rivers, streams and storm drains
- Never discharge clippings near lakes, rivers, streams or drains
- Sweep fertilizer granules from walks and driveways onto the lawn
- Wash your spreader on the grass

WATER SMART

- Don't soak your lawn and avoid night watering
- Watering should not produce puddles; lighter, more frequent watering is best
- Brown lawns are OK; dormancy is a natural response to drought, however, some water may be necessary during an extended drought of more than a month
- Following Go Green LawnCare Tips will reduce the amount of water your lawn needs

MSU is an affirmative-action, equal-opportunity employer. Michigan State University Extension programs and materials are open to all without regard to race, color, national origin, gender, gender identity, religion, age, height, weight, disability, political beliefs, sexual orientation, marital status, family status or veteran status.
