https://www.canr.msu.edu/malting_barley/

Malting Barley Needs in the Eastern U.S.

- Varieties suitable for craft malting and brewing
- Varieties adapted to warm nighttime temps, summer heat and drought
- Varieties with resistance to:
 - Pre-harvest sprouting
 - Net and spot blotch
 - Powdery mildew
 - Fusarium head blight and DON accumulation

Eastern Spring Barley Nursery

- Investigating barley varieties for local, craft malt
- NDSU established the project & network in 2015
- 10 universities and 13 locations
- Common list of 20-25 barley varieties grown
- Varieties selected based on input from craft industry and research team
- Has included two and six-rowed varieties from the US, Canada and Europe
- [The New Brewer feature article](#)

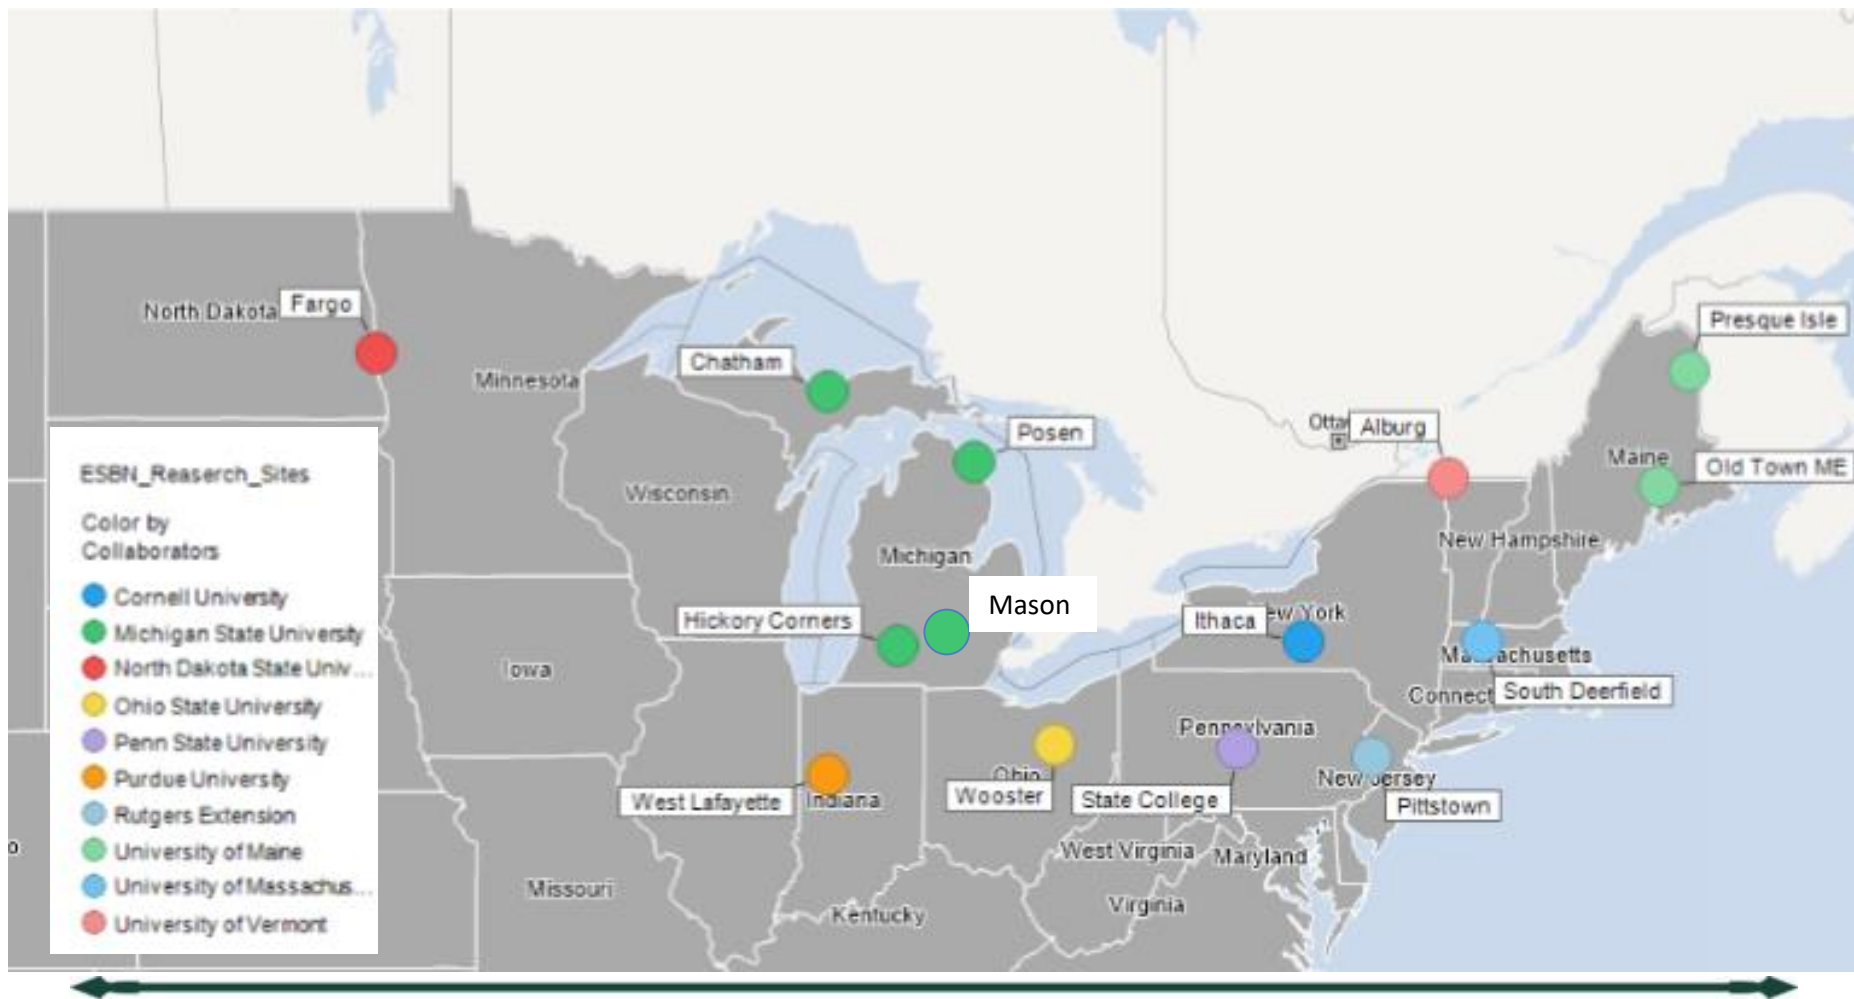

American Malting
Barley Association

Michigan Crop
Improvement Association

Eastern Spring Barley Nursery

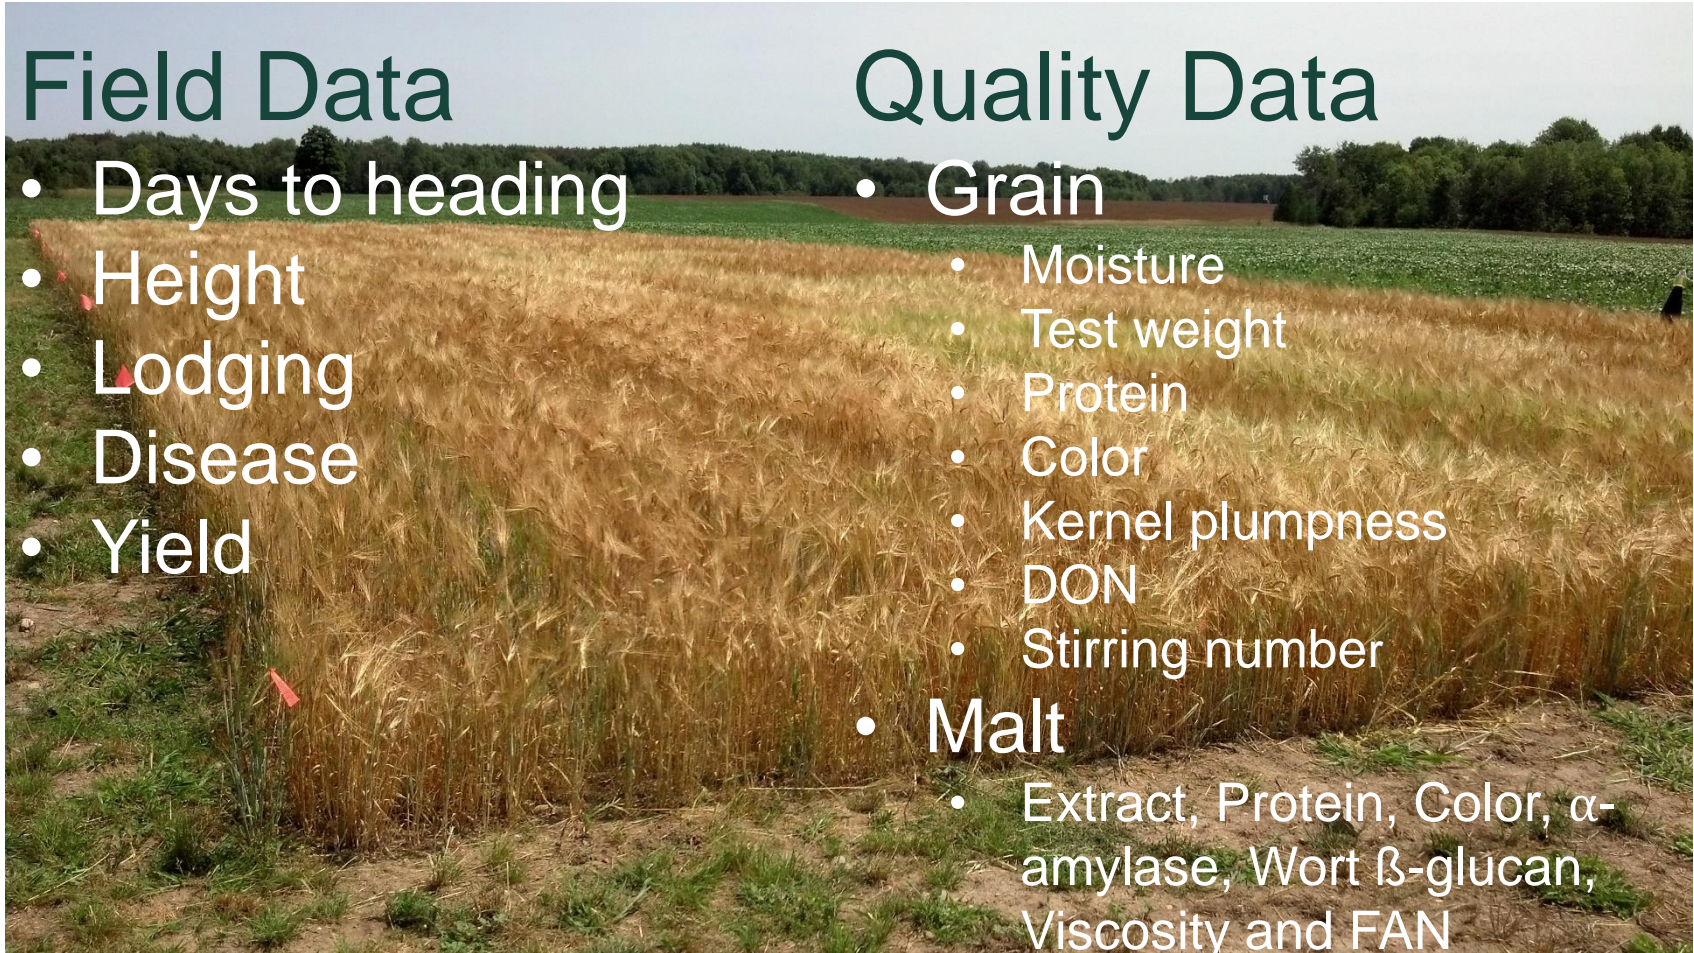

Eastern Spring Barley Nursery

Field Data

- Days to heading
- Height
- Lodging
- Disease
- Yield

Quality Data

- Grain
 - Moisture
 - Test weight
 - Protein
 - Color
 - Kernel plumpness
 - DON
 - Stirring number
- Malt
 - Extract, Protein, Color, α -amylase, Wort β -glucan, Viscosity and FAN

Analysis Methods

- Michigan agronomic and grain quality data 2015-21
- 73 lines filtered to 20 lines, each tested for 3+ years
- LME with variety as fixed, years and locations as random
- Multivariate hierarchical cluster analysis using least square means (Ward)
- PHS resistance used as base criteria for evaluating cluster/variety performance

Varieties Included

1. 2ND28065
2. 2ND32529
3. AAC CONNECT
4. AAC SYNERGY
5. ACCORDINE
6. CONLON
7. ESMA
8. EXPLORER
9. KLARINETTE
10. KWS BECKIE
11. KWS FANTEX
12. KWS TINKA
13. LCS GENIE
14. LCS ODYSSEY
15. ND GENESIS
16. NEWDALE
17. PINNACLE
18. QUEST
19. SANGRIA
20. TRADITION

Location Means

Discussion

- No one barley variety has it all
- Pre-harvest sprout will continue to be a major challenge
- European varieties with PHS resistance have performed best in Michigan
- Malting performance and quality will continue to drive variety selection
- LCS Odyssey and Conlon have been most popular, but Michigan should consider Explorer, KWS Fantex, Beckie, Sangria and Genie
- Winter barley may be a better fit for Southern Michigan

Industry Insights

“We devoted some acreage to Fantex in 2021 and it did not have good sprout resistance. In our experience, Odyssey continues to be the best performing spring barley for grain and malt quality.”

– Jeff Malkiewicz, Great Lakes Malting Company

“I've mostly malted winter varieties for the last two years (Calypso, Violetta and Wintmalt) and Violetta is for sure the best of these three and nearly as easy to malt for me as Odyssey. Given the agronomic advantages of winter over spring barley in Michigan, this is mostly what I'm looking to grow and malt at this time.”

– Larry Judge, Mitten State Malt

2022 ESNB Results

- 2022 preliminary report is available today
 - We are working on grain quality analysis this month, and will update the report online at www.canr.msu.edu/malting_barley
 - Both locations averaged around 70 bu/a
 - Spring barley had a much better year in Southern MI
 - Top yielding varieties: CU198, Esma, Klarinette, KWS Jessie, Kellie and Willis
 - I'm personally excited for CU198, Cornell's follow-up to Excelsior Gold
- 

Plans for 2023 Spring Barley

- MCIA grant funding to support expansion of 5 elite barley varieties to farm scale in MI
- Cooperating farmers or farmer/maltsters run strip trials collecting agronomic data
- UPREC analyzes grain quality
- Cooperating maltsters malt small batches of each variety and document/share their experience
- Shriner Lab at MSU analyzes malt quality
- Great Lakes Malting Co., Empire Malting Co., and Mitten State Malt
